Updated July 2014

Better Care Fund planning template – Part 1

Please note, there are two parts to the Better Care Fund planning template. Both parts must be completed as part of your Better Care Fund Submission. Part 2 is in Excel and contains metrics and finance.

Both parts of the plans are to be submitted by 12 noon on 19th September 2014. Please send as attachments to bettercarefund@dh.gsi.gov.uk as well as to the relevant NHS England Area Team and Local government representative.

To find your relevant Area Team and local government representative, and for additional support, guidance and contact details, please see the Better Care Fund pages on the NHS England or LGA websites.

1) PLAN DETAILS

a) Summary of Plan

2) VISION FOR HEALTH AND CARE SERVICES

a) Drawing on your JSNA, JHWS and patient and service user feedback, please describe the vision for health and social care services for this community for 2019/20

Our shared vision for integrated care and support for our local population through the provision of well co-ordinated, personalised health and care services "Better Care, Better Quality of Life in Southwark" is set out in full in \textit{appendix 1}. It is a vision for the whole system, not just health and social care, based on evidence of need and the views of our population. In particular it links to Southwark’s Health and Wellbeing Strategy, NHS Southwark CCG’s Primary and Community Care Strategy, Operating Plan and 5 year plan, Southwark’s Housing Strategy and the Council’s Fairer Future priorities.

We want people to live healthy, independent and fulfilling lives, based on choices that are important to them.

Our vision for integrated care in Southwark is for people to stay healthier at home for longer by supporting people to manage their own health and well-being, by doing more to prevent ill health and by providing more services in people’s homes and in the community. We want people to feel in control of their lives and their care, with the services they receive co-ordinated and planned with them around their individual needs.

We will build upon our existing locality and neighbourhood work to integrate services around people’s needs, but recognise that we now need to transform the way we work together across health and care to really achieve this.

Our ambition for integrated care in Southwark is to deliver:

- More care in people’s homes and in their local neighbourhoods
- Person-centred care, organised in collaboration with the individual and their carers
- Better value care and support at home, with less reliance on care homes and hospital based care
- Better experience of care for people and their carers
- Population based care that is pro-active and preventative
- Less duplication and a more efficient system overall
- Improved outcomes for people’s health and wellbeing
- Enabling stronger and more resilient communities
- Southwark as a great place to live and work,

We will know we have achieved our ambition for integrated health and care in Southwark when we need to rely less on hospital-based care and care homes, because more care will be delivered in people’s homes and in their local neighbourhoods. People will be admitted to hospital quickly when they need to be, to access our local world class facilities and services. Hospitals will be able to discharge people quicker, because effective and pro active services at home and in the community will help people get back on their feet and stay healthy and independent for longer.
This vision will deliver improved outcomes for the people of Southwark in areas where we know from benchmarking that improvements can be delivered, as set out in our JSNA, for example in premature mortality linked to long term conditions.

The Better Care Fund (BCF) will play a key enabling role in driving forward this vision by creating a substantial £22m pooled budget between the Council and CCG for the delivery of community based services that are strongly focused on shared aspirations. This will provide a strong platform for developing more integrated approaches to services delivery and integrated governance, and already the preparatory work in 2014/15 is helping develop joined up thinking about whole system investment and multi-disciplinary working.

At present the BCF in Southwark is limited to the national allocation, but as we progress these discussions, there is potential to expand the pooled budget to cover a larger proportion of our shared expenditure.

The vision is also aligned with our neighbouring borough Lambeth through the work of Southwark and Lambeth Integrated Care (SLIC) programme. SLIC is a multi agency federation of commissioners, acute and mental health providers, social services and the voluntary sector working together to integrate care. The SLIC programme has been a critical enabling vehicle for agreeing a programme of integration work across Lambeth & Southwark and supporting a shift of resources to support our priorities for the BCF. This is particularly reflected through specific jointly commissioned admissions avoidance services that operate across both boroughs that will be funded through BCF arrangements, and a shared approach to key enablers of integration including the development of an appropriate workforce and information sharing arrangements. Over the past few months we have been working with our SLIC partners on options for further progressing wider integration, including developing a framework for outcome based integrated commissioning and exploring different financial and contractual mechanisms for integrated care, including capitated approaches to pooled budgets.

Integration in Southwark is focused on the key role of primary care to provide a co-ordinated, effective, person centred approach to working with people with complex needs through the development of a neighbourhood model.

The plan is underpinned by a vision for improving services in the community through better integrated working that has been developed over several years and shaped by a range of engagement activity.

b) What difference will this make to patient and service user outcomes?

The vision and ambition set out in (a) above will be measured as follows.

Expansion of integrated community support to reduce need for intensive health and social care support will be measured by:

- Increases in the numbers of people benefitting from the community multi disciplinary team approach, and activity levels in the BCF funded services such as home ward, admissions avoidance and re-ablement.
- reductions in the rate of avoidable emergency admissions
• shifting the balance of care away from care homes, including reduced admissions
• impact of re-ablement in reducing the care needs of clients using the service
• delayed transfers of care
• length of stay in hospital and emergency bed days for older people
• people reporting they feel supported to manage their long term conditions

All BCF schemes directly contribute to these goals.

A key underlying principle of our BCF plan enabled through the SLIC programme is for integrated care to help achieve financial sustainability for the whole health and social care system, as well as to improve population health, improving key health and life outcomes. The success of this will be evaluated with reference to the financial position of all commissioners and providers. We are developing a 'balanced scorecard' tracking outcomes and costs across the health and social care economy, which will help us to assess our impact on delivering better value care. As part of this, we are working to define a set of outcome measures that assess the impact on the health and wellbeing of our target population, which will include outcome measures defined by residents and measured through local surveys. These measures will be built into new integrated contractual mechanism enabling integrated approaches to provision and a focus on prevention.

In addition to the BCF outcome metrics, we have worked with the SLIC Citizen’s Board and user groups in Southwark and Lambeth as well as Public Health to articulate a wider set of outcome indicators that reflect local people’s priorities and aspirations for their health and wellbeing.

c) What changes will have been delivered in the pattern and configuration of services over the next five years, and how will BCF funded work contribute to this?

The focus for the Southwark whole system is to enable people to live independently and well for as long as possible, using the widest range of mechanisms and support options possible. Some of the key aspects of change we want to see are:

• more care for older people and people with long term conditions will be delivered through locality based community multi-disciplinary teams with a lead professional responsible for co-ordinating the care of individuals, ensuring an integrated and personalised approach to case management by all services working with each person - GPs, Community Health, Social Care, Housing, Mental Health workers and hospital services.
• there will be less care needed in acute settings. A&E attendance and avoidable emergency admissions will reduce by 3.5% across our 2 main acute hospitals as community teams provide more targeted support to those at risk.
• when people do need acute care they will stay in hospital for shorter periods, returning home safely with the help of services such as @Home (Home Ward) and enhanced discharge support.
• re-ablement and intermediate care will increasingly provide effective short term interventions that rehabilitate people, restoring health and independence
• the balance of social care will shift away from care homes towards support in people’s own homes and supported housing schemes including Extra Care.
• home care services will be funded with a view to radically improving quality and
outcomes, with home carers linked in with other health and care professionals through the multi-disciplinary team approach

- there will be enhanced support for carers in line with our Carers Strategy and the Care Act
- there will be a greater role for technology through telecare to help people live safely at home and investigating opportunities for telemedicine.
- a more integrated and coherent approach to preventative services including the voluntary sector tackling issues such as social isolation
- through BCF and whole systems funding services will be responsive and accessible 7 days a week, including improvements to weekend discharge planning with social care, admissions avoidance community services, as well as primary care
- new focus on developing dementia related services
- developing a neighbourhood model

The BCF will contribute to this vision by funding key community based services on a pooled budget basis using a person centred approach, co-ordinating the input of different support services that need to work together through multi-disciplinary neighbourhood based working.

The “golden thread” that unites the range of BCF schemes in this plan is that they all help people with health and care needs to live independent, healthy lives in their own homes by providing an integrated approach to meet each persons individual set of needs.
3) CASE FOR CHANGE

Please set out a clear, analytically driven understanding of how care can be improved by integration in your area, explaining the risk stratification exercises you have undertaken as part of this.

Our work as partners of Southwark and Lambeth Integrated Care (SLIC) has included a detailed programme that has examined the case for change. This work has been supported by all the key local commissioners and providers of acute, primary and community based care services who were involved as the business case has developed. This work has shaped the approach to the pooling of budgets in the BCF which is very much the first step in a wider integration agenda. The analysis was based on detailed data on the population needs, current services, demographic projections of need and finance and evidence about what models work.

In appendix 2 there is a summary of some of the case for change work including graphical representations of the findings.

The analysis shows that despite the existing configuration of world class health services available in the borough, outcomes remain poor for many local people. An outcomes based approach to integrated commissioning and provision will be developed, including a greater focus on prevention, of which BCF funded services will be one part.

The challenges are also clearly set out in the Health and Wellbeing Strategy. Southwark has an aging population, with an extra 900 people aged 85 or over expected by 2020, which is an increase of nearly 30% on current levels. The number of people with disabilities and learning difficulties is also rising steadily, with those under 65 years predicted to increase to around 20,000 by 2025. There are high levels of deprivation, with almost half of over-65s claiming pension credits, which is higher than the London average. The ageing population brings health challenges, with the estimated 12,500 over-65s in Southwark living with a long term illness rising to over 17,000 by 2025. The borough has a higher prevalence of long term conditions for older people than national or London figures. In addition, there are estimated to be around 1,800 people living with dementia, a figure that is predicted to rise by around 300 by 2020. Emergency admission rates for the over 75s, however, are among the worst in the country, and overall satisfaction levels with social care support services are below national benchmarks.

A key conclusion of the case for change work is that the current system is financially unsustainable without transformative change, with a potential financial gap of £171m across entire system of health and care by 2018/19 in Southwark. The evidence shows that integration can help bridge that gap by shifting the balance of care towards more preventative community based care, and in so doing improve outcomes. All partners agree that there is scope to improve services and reduce costs by better integrating services. Our risk stratification and population segmentation approach has led to an initial focus on older people and long term conditions, and this has informed the focus of the BCF.

The BCF is one part of the integrated response to making the required changes to achieve sustainability and improve outcomes.
4) PLAN OF ACTION

a) Please map out the key milestones associated with the delivery of the Better Care Fund plan and any key interdependencies

<table>
<thead>
<tr>

<td>May 2015 for Q1</td>
</tr>
<tr>
<td>Ongoing monitoring and improvement of BCF schemes by HWB</td>
<td>July 2015</td>
</tr>
</tbody>
</table>
Each individual area will have more detailed plans covering specific actions and milestones including staff and user engagement.

Key interdependencies relate to the overall SLIC programme, including the workstreams for data sharing and workforce development. The neighbourhood working workstream and primary care development are also key links.

b) Please articulate the overarching governance arrangements for integrated care locally

**Governance arrangements for BCF and integrated working in Southwark**

The Health and Wellbeing Board will be responsible for agreeing the Better Care Fund plan and overseeing its successful delivery through the quarterly report process. The terms of reference of the Board and appropriate underlying support and governance structures to be reviewed to ensure they are fit for this purpose, with an independent review due to report in October 2014.

Although jointly responsible for delivering on the objectives of the fund through the Health and Wellbeing Board individual organisations will remain formally accountable for their own expenditure pooled within the BCF through their existing governance arrangements. The accountable officers will be the council and CCG lead directors.

For different schemes within the fund, management responsibility for delivery will be delegated to different bodies that will be accountable to the Health and Wellbeing Board via relevant CCG and Local Authority management arrangements.

Roles, responsibilities and risk share arrangements will be clearly set out in a Section 75 agreement(s) under which the pooled funding will be managed.
A system of quarterly reporting to the HWB will be in place from 2014/15 covering all key schemes expenditures, milestones, activity and performance. An initial Quarter 1 report has been provided on 28th July. A Health and Social Care Partnership Board has been established as a sub-group of the Board to ensure there is capacity to do this effectively, and an Integration Working Group is developing the programme of work to implement it. The Partnership Board will model a fresh approach to performance monitoring of integrated provision over 14/15 in preparation for the BCF in 15/16.

The SLIC programme management structure will feed into BCF monitoring arrangements for those projects it directly manages (including @home and Enhanced Rapid Response) following allocation of lead responsibilities at the detailed planning stage. The sponsor Board includes BCF lead directors of the CCG and council.

c) Please provide details of the management and oversight of the delivery of the Better Care Fund plan, including management of any remedial actions should plans go off track.

The BCF will be managed through Programme Board and delivery group strictures. Each BCF scheme has a clear plan setting out the service details, key deliverables in terms of activity and outcomes, named lead organisations and managers, risks, dependencies, milestones and reporting arrangements. These requirements will be reflected in the Section 75 agreement underpinning the governance of the pooled budget. Quarterly exception reporting on all schemes will be required, although care will be taken not to add unnecessary or duplicated reporting burdens. Collated reports will be discussed initially at the Integrated Working Group and the Section 75 review meetings of the Health and Social Care Partnership Board, with an overview and exception report discussed at Joint SMT. This will feed into a quarterly report for the Health and Wellbeing Board to assess progress and discuss any areas that need unblocking. Although early in the programme the first quarterly update report on the BCF was provided to the HWB on July 28th.

Individual schemes will be overseen by delivery groups reporting up to the IWG as set out in the diagram above, including Carer, Neighbourhood working and Urgent Care.

For any scheme element that is not on track a recovery plan will be provided. Particular focus will be given to spending and any variance on plans will be addressed, including consideration of reinvestment of any slippage.

Outcomes will be managed at scheme level and whole system level, with close performance management of key measures undertaken on a monthly basis, including analysis of avoidable admissions, care home placements and delayed transfers of care.

A jointly funded senior programme manager has been recruited to support the delivery of the Better Care Fund and the wider integration agenda. The BCF programme manager reports to the Director of Integrated Commissioning of the CCG and the Director of Adult Social Services.

A number of schemes will be managed through the SLIC programme management structure, including the cross borough admissions avoidance and hospital @home services.
**d) List of planned BCF schemes**

The list below sets out the individual projects we are planning as part of the Better Care Fund. See the *Detailed Scheme Description* templates (Annex 1) for each of these schemes, and how they will address the issues in our case for change and vision.

<table>
<thead>
<tr>
<th>Ref no.</th>
<th>Scheme</th>
<th>2015/16 £000</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Existing NHS transfers</strong>: range of social care services that support health care, with a focus on discharge support. To be reviewed along with other schemes to ensure best integrated approach.</td>
<td>5,621</td>
</tr>
<tr>
<td>2</td>
<td><strong>Winter pressure grant funded services</strong>: additional social work input to support 7 day discharge &amp; admissions avoidance, mental health re-ablement, enhanced rapid response, care home support, OT, reablement 7 day working, &amp; Nightowls overnight care.</td>
<td>1,048</td>
</tr>
<tr>
<td>3</td>
<td><strong>Re-ablement</strong>: grant rolled forward, services to be reviewed and further integrated with discharge support, admissions avoidance and enhanced rapid response.</td>

b) Contingency plan and risk sharing

Please outline the locally agreed plans in the event that the target for reduction in emergency admissions is not met, including what risk sharing arrangements are in place i) between commissioners across health and social care and ii) between providers and commissioners

We have set a reduction target of 3.5% in the number of emergency admissions over the calendar year 2015 in line with the national expectation for the BCF.

This is an ambitious target given the historic growth in local and London-wide emergency activity. It is recognised that there is a risk it will not be achieved, particularly as many BCF schemes will not fully impact until later in 2015. We can not be certain of the precise impact of any particular scheme and the impact of wider pressures such as the growth of need in the older population. However, reducing emergency admissions is a shared target across a wide range of service initiatives outside the BCF and, as set out in the case for change, we are ambitious to achieve the transformation necessary to achieve sustainability across the health and care system.

Should the target not be achieved there is a specific risk in relation to the payment for performance system underlying the BCF framework, which will put up to £1.3m at risk for Southwark if a decrease is not achieved. If that is the case the money will be withheld from the pooled budget and redirected towards the CCG, who will be able to use it to meet the costs of excess acute activity above plan. This will mitigate the risk to financial balance in the CCG and acute sector.

During 2014/15 and beyond the risk of under performance will be managed through a range of service initiatives that will help reduce demand on acute, including the System Resilience investments which are closely aligned with the BCF approach and our
ambitious primary care transformation programme. Delivery of BCF and related schemes against targets will be closely monitored and recovery plans put in place at the earliest sign of targets not being met.

In terms of the risk to the BCF from the potential loss of £1.3m during 2015, it has been recognised it would be damaging to the overall success of the long term integration strategy if an approach of disinvesting from BCF schemes were taken to balance the fund. It has therefore been agreed locally by the Integration Working Group and Heath and Wellbeing Board to work towards a risk management approach that is based on establishing a reserve that can be called upon in the event of short term under performance. This will enable services to be planned with a stable footing and will be reflected in the Section 75 agreement underpinning the pooled budget. A reserve is being established in 2014-15 which will mitigate any under performance, ensuring that a full year’s funding is available for all projects.

6) ALIGNMENT

a) Please describe how these plans align with other initiatives related to care and support underway in your area

We have positioned our response to the BCF as a key enabling element of a wider transformational change in health and care services in Southwark. The Health and Wellbeing Strategy articulates the overall goals of the system and the Vision for integration “Better Care, better quality of life” (annex 1) sets out the ambition that the integration agenda has in achieving this.

The Health and Wellbeing Strategy highlights specific priorities under the themes of a) building healthier and more resilient communities, and tackling the root causes of ill health, and b) improving the experience and outcomes for our most vulnerable residents, and enabling them to live more independent lives, that the BCF has a key role in delivering, specifically:

- Provide more services in community settings, reducing the need for specialist or acute support across a range of needs and areas
- Enable more residents with complex and chronic conditions to lead independent and fulfilling lives for longer and enjoy good mental wellbeing
- Give users and carers a seamless, personalised experience, enabling them to have more choice and control over their life, death and support services

There is strong alignment and understanding between the BCF programme and the Social Services vision and associated transformation programme, which has a clear focus on providing personalised services in the community that help people live safely and independently at home, working in an integrated way with all services that support an individual. The key objectives of the social care system include promoting quality of life and preventing, delaying and reducing the need for intensive health and care support.
Key shared targets with the BCF include care home admissions reductions, re-ablement effectiveness, user experience and minimising delayed transfers of care.

The local authority budget round for 2015/16 currently underway is based upon a consideration of the impact BCF resources on the overall delivery strategy.

In addition to social care, the Council Plan is well aligned with BCF priorities through the “Age Friendly Borough” strategy which will seek to ensure a multi-agency approach including Housing, public health prevention strategies and a specific commitment to improve the quality of home care services.

As set out in b) below the BCF is an integral part of the NHS planning at local and regional level, which includes plans for challenged health economies, the primary and community care strategy and development of the neighbourhood model which is the key building block for integrated services.

The SLIC programme is closely linked to the BCF, with certain key schemes funded directly by the BCF in 2015/16 (@home, admissions avoidance, enhanced rapid response) and other enabling workstreams that are closely related to BCF objectives including Holistic Health Assessments, Integrated Care Management and CMDT development, homecare workforce development, care home support, consultant community hotline, simplified discharge, falls, infection, nutrition and dementia.

The Carers funding element of the BCF is targeted on funding the recently agreed multi-agency carers strategy.

The programme manager for the Better Care Fund is expected to help identify all related workstreams and ensure that there is good alignment between these and the BCF.

b) Please describe how your BCF plan of action aligns with existing 2 year operating and 5 year strategic plans, as well as local government planning documents

The core schemes included in the Southwark BCF plan are reflected in the CCG’s 2 year Operating Plan for 2014 to 2016. The Operating Plan forms the initial phase of the CCG’s 5 year strategic plan (completed as part of the south east London SPG), which has also therefore been developed to align with the shared approach to the BCF. Our BCF plan reflects the core part of Southwark CCG’s current operational and strategic plans as all are centred on enhancing integration, neighbourhood working, reducing unplanned admissions to hospital, enabling community resilience and promoting prevention in line with BCF priorities.

The impact of the Better Care Fund has informed the development of the CCG’s financial model and our current QIPP and activity assumptions for the next two years.

The budget and service planning processes of the local authority reflect the BCF resources available to support integration and wider adult care objectives as set out in the Local Account and the adult care business plan.

c) Please describe how your BCF plans align with your plans for primary co-commissioning
• For those areas which have not applied for primary co-commissioning status, please confirm that you have discussed the plan with primary care leads.

Both the BCF plan and our wider vision for integration have been discussed with the full range of providers including Primary Care. The CCG’s Primary and Community Care Strategy, approved by the CCGs membership and Governing body relates the transformation of primary care directly to the goals and implementation of our Better Care Fund plans. Our engagement has extended to full discussions with the Local Medical Committee who are represented at the key decision making forums of both the CCG and the wider partnership focused upon the delivery of Integration through the Lambeth and Southwark Integrated Care (SLIC) programme.

Whilst the model for co-commissioning of primary care services remains under discussion locally, the CCG enjoys a productive interaction with NHS England as the direct commissioners of primary care services for the borough and this has supported the development of commissioning strategies, aligned to the BCF.

As the details of the national approach to co-commissioning become clearer, and as we develop our local response to those further, we will seek to optimise the role of primary care within the integration agenda through the aligned commissioning of those services, recognising that patient experience and the quality of primary care is key to successful integration.

Integration in Southwark is focused on the key role of primary care to provide a co-ordinated, effective, person centred approach to working with people with complex needs through the development of a neighbourhood model.

Southwark CCG has submitted a combined expression of interest with SE London CCGs, outlining our commitment to explore co-commissioning based upon a set of principles and assumptions. An initial review suggests that co-commissioning may be beneficial by:

• aligning the commissioning of services more directly to the CCG and South East London SPG five year strategies;
• harnessing local knowledge of member practices and involving the communities they serve in commissioning decisions;
• aligning commissioning intentions directly to commissioning investment decisions.

Primary care representatives and commissioners have been closely involved in the development of the integration agenda throughout, including GP representation at BCF and integration workshops, SLIC workstreams etc.
7) NATIONAL CONDITIONS

Please give a brief description of how the plan meets each of the national conditions for the BCF, noting that risk-sharing and provider impact will be covered in the following sections.

a) Protecting social care services

i) Please outline your agreed local definition of protecting adult social care services (not spending)

Protecting social services means ensuring that there are sufficient resources for social services that promote health and wellbeing and reduce demand on health services, in particular those at the interface of health and social care where seamless services are required to improve user experience and promote efficient use of resources.

This means focussing Better Care Funding on areas that would otherwise be vulnerable under current funding reductions facing local authorities, combined with rising demand for services due to demographic factors. This includes maintaining current levels of eligibility criteria at substantial and critical needs, provision of assessment, care packages and personal budgets for home based care, re-ablement, intermediate care and hospital discharge and support to carers, and signposting to prevention and community support services for those below the eligibility threshold.

ii) Please explain how local schemes and spending plans will support the commitment to protect social care

The Better Care Fund directly funds a range of adult care services, with around 75% (£15.5m) of the fund being invested in this way. In particular, discharge support services, re-ablement and Intermediate Care Services have assisted social services in providing a level of assessment and care management services, and care packages that is consistent with existing eligibility criteria, and this will continue and expand in 2015/16.

The additional BCF service proposals generally all have an impact in terms of reducing, delaying or preventing the need for more intensive health and social care services, and hence assist the financial sustainability of the social care as well as health. For example:

- support to carers helps prevent the breakdown of informal care arrangements and so reduces the pressure on statutory services
- self management support to enable people to keep themselves well and increase their levels of independence
- funding quality improvements in home care
- funding 7 day working in hospital social care teams
- funding telecare expansion

The BCF will also help the local authority meet a proportion of the costs associated with implementing the Care Act (£1m, in line with national allocations). In addition there are sums specifically earmarked for the protection of social care (£2m) to help meet budget reduction targets without withdrawing services of benefit to health.
iii) Please indicate the total amount from the BCF that has been allocated for the protection of adult social care services. (And please confirm that at least your local proportion of the £135m has been identified from the additional £1.9bn funding from the NHS in 2015/16 for the implementation of the new Care Act duties.)

The total sum invested in social care services comes to £15.5m as set out in template 2, allocated to a range of services, all of which can be considered as protecting social care. Of this £0.5m has been allocated in 2015/16 specifically as a contribution to the Social Care budget reduction requirement, which will be allocated to specific services at risk in the forthcoming budget round. This adds to the use of £1.5m of the existing NHS transfer previously used in the same way. Without this contribution of £2m Social Care would need to reduce base budgets accordingly and this savings requirement would necessitate a material reduction in access to social services that would have a significant impact on health services.

A sum of £1m has been set in the BCF for the implementation of the Care Act. This is in line with the national guidelines stating the BCF should meet these costs. The Carers strategy funding of £400k within the BCF will also potentially assist with Care Act implementation.

iv) Please explain how the new duties resulting from care and support reform set out in the Care Act 2014 will be met

There is a comprehensive change management programme in place to deliver the Care Act requirements. This is managed through a project steering group chaired by the Director of Adult Social Care. The CCG is represented on this group through the Integration Programme Manager who oversees the BCF to ensure an integrated approach is taken.

For details see Care Act implementation scheme in annex 1.13.

The BCF will play a role not just in terms of funding the cost of the changes, but also in facilitating the integrated working required to deliver the agenda.

v) Please specify the level of resource that will be dedicated to carer-specific support

£1.13m (including estimate of Care Act implementation funding costs)

Within the BCF there is a specific sum of £450k in 2015/16 for rolling out the Carers Strategy (see scheme details in annex 1.10) which adds to £400k funding for Carers already in place in 14/15 from the existing NHS transfer. In addition to this £850k there is also a potentially significant element of funding within the Care Act implementation budget (to be finalised, but potentially £280k based on national estimates)
vi) Please explain to what extent has the local authority’s budget been affected against what was originally forecast with the original BCF plan?

There has been no change to the level of social care related investment in the revised submission hence the revenue budget assumptions are unchanged. However the Pay for Performance element has introduced a risk that around £1.3m of funding may be withdrawn subject to performance on emergency admissions. As set out in section 5(b) we are seeking to mitigate this by establishing a shared risk reserve which will impact on the resource position of the council, particularly if the reserve needs to be applied in the event of a performance shortfall.

b) 7 day services to support discharge

Please describe your agreed local plans for implementing seven day services in health and social care to support patients being discharged and to prevent unnecessary admissions at weekends

Within Southwark we already have a range of services working 7 days a week to support discharge and prevent admission, including our admission avoidance service (@Home). Across the health economy, we are moving towards 7 day working, and are currently piloting improved weekend discharge support within the Supported Discharge Team, along with a pilot of a simplified discharge pathway led by SLIC, which operates 7 days a week interfacing with the @Home service and Enhanced Rapid Response.

Our local acute Trusts are also moving to 7 day working, and we will need to bring together all these plans and reach agreement on how we fund any additional costs in community based services to support these - through redistributing savings from acute bed day reductions, or making new investment across the system. The BCF is aligned to winter planning and targeted plans on 7 day working. This is aligned to the Prime Minister’s Challenge Fund for which Southwark’s application was successful.

Southwark CCG plans to commission extended primary care working on a 7 day basis from November 2014, which would increase the capacity of primary care to offer both planned and urgent care. Increasing accessibility of GP services is expected to reduce the demand for urgent care services elsewhere on the system, avoid pressure surges on particular days of the week, and improve continuity of care for people who have ongoing care needs. By April 2015, primary health care will be accessible from 8am to 8pm, 7 days a week.

Our Better Care Funding plans include additional investment to increase the capacity of discharge support services (admission avoidance and other social care support), as well as a contribution towards the costs of extended access to primary care.

Reflecting this strategic commitment to 7 day working, a budget of £1.5m has been set
aside in 2015/16 BCF plans specifically for delivering on this priority, supporting developments underway in specific areas. These will be seed funded from winter resilience funding where possible in 14/15 to ensure early progress is made.

c) Data sharing

i) Please set out the plans you have in place for using the NHS Number as the primary identifier for correspondence across all health and care services

The NHS number is being rolled out as the primary identifier across health and social care services and good progress is being made. Agreement from all partners is in place, and the recording of NHS number in all care records is improving.

The NHS Number has always been identified as the preferred unique identifier for patients / users. All health providers use the NHS Number with excellent progress having been made to maintain data quality. The council went through a NHS number cleansing process during 2012/13 with very good results. Due to the inception of the CCG there has been a delay in re-instating this process. Plans are being developed for South London CSU to support the PDS batch processing for the councils.

Work is to be undertaken to explore and enable the Council to become PDS compliant and bought within the N3 network.

The Council is to replace its current adult and children’s system. The pre-implementation phase is capturing the requirements for health and social care sharing of information (Phase 2 of the Local Unified Care Record project – see below).

ii) Please explain your approach for adopting systems that are based upon Open APIs (Application Programming Interface) and Open Standards (i.e. secure email standards, interoperability standards (ITK))

We have made progress on information sharing within the SLIC programme, including the ‘Collaborator’ service, which allows members of Community Multi-Disciplinary Teams to share data on case management patients in a secure way, which is compliant with information governance requirements. The next phase of our work is to develop solutions which will allow more routine data sharing. The SLIC programme are leading work to develop an Information Sharing Strategy that will enable data sharing across health and social care, working to ITK standards.

A vital challenge remains, to make key clinical information available to primary care clinicians, other care providers and ultimately patients. LUCR (Local Unified Care Record) will enable the real time sharing of clinical information between Kings Health Partners and with primary care across the boroughs of Lambeth and Southwark. It recognises the complexity of the various information needs and the technical difficulty of developing integrated systems.
The main health providers are committed to their EPR systems and developing a clinical portal (across acute, community and mental health). With only two practices not using EMIS Web this is an ideal opportunity to make the 'link'.

LUCR will allow Primary Care clinicians to view all KHP vital clinical information, including community services from within their EMIS Web.

It builds upon local IM&T strategies. It will be a portal, based on NHS numbers, follows IG, is fully auditable, ITK compliant, easily accessed from the existing partner EPRs.

The intention is to extend into Social Care in the future. With common goals of patient centric care and patient empowerment, the final stage would look to integrate into local patient / public portal.

Approved in principle, LUCR is in the early stages of pre-implementation and planning. Data Sharing agreements with all partners are being approved. LUCR aligns to the work underway with the MIG (Medical Interoperability Gateway) for the viewing of primary care records across the patch.

Each partner organisation has already committed capital funding to the project and this via SLIC (hosted by GSTT).

Please explain your approach for ensuring that the appropriate IG Controls will be in place. These will need to cover NHS Standard Contract requirements, IG Toolkit requirements, professional clinical practice and in particular requirements set out in Caldicott2.

Work has continued in developing an overarching Data Sharing Agreement (DSA). This has been via a Local Unified Care Record Data Sharing working group, comprising of Caldicott leads, LMC GP leads, and IG leads.

Key principles are:

- A framework to share between the organisations who are subject to the agreement (in accordance to the DPA and Caldicott principles)
- An agreement to share clinical information. The actual data set of information shared will be constrained by the system design and capability.
- A programme of communication to inform patients that in the course of their care data will be shared between clinicians with a legitimate reason to access their records
- Mechanisms to establish and record patient opt out preferences
- Appropriate system logic to exclude patient information on the basis of expressed opt out.

The patient choice not to share their record, expressed to any one or all of the partner organisations (King’s, Guy’s, SLAM or Primary Care), will be recorded in the partner organisation system and will exclude ALL record sharing for the patient between the partners.
d) Joint assessment and accountable lead professional for high risk populations

i) Please specify what proportion of the adult population are identified as at high risk of hospital admission, and what approach to risk stratification was used to identify them

Currently 3,340 adults have been identified through risk stratification as being at high risk of hospital admission, representing 1.4% of the adult population.

For risk stratification we use the HealthNumerics-RISC system which is a risk identification and stratification tool provided by United Health which identifies patients at risk of a future unplanned hospitalisation due to chronic conditions within the next 12 months. The source of data for the predictive modelling is GP data (register, activity and medications) and Secondary Care (inpatient, outpatient and A&E). The system produces monthly reports with patient level risk scorings for clinicians.

ii) Please describe the joint process in place to assess risk, plan care and allocate a lead professional for this population

Currently, our approach to care co-ordination and accountable lead professional has been implemented for older adults and led by Primary Care. We have an integrated approach to risk stratification and identification of high risk patients in primary care. In addition to the HealthNumerics risk data, older people will be offered proactive, Holistic Health Assessments (HHAs) by their GP practice to help identify issues and risks early. People will be supported by Integrated Care Managers (ICMs) and GPs where it is deemed appropriate (adding to the support being implemented by NHSE in the national admission avoidance schemes). This care management and co-ordination will aim to ensure people are engaged in their own care and that a full range of support is made available to someone in a proactive way to improve overall wellbeing and outcomes and reduce the need for unplanned hospital admissions. ICMs and GPs will be supported by Community Multi-Disciplinary Teams (CMDTs) who will support complex care management, offer additional advice and support, help to unblock service issues and problems and ensure holistic care is being offered. These CMDT meetings are already established and supporting complex care in each locality. They consist of professionals from acute trusts, mental health, social care and community healthcare.

In 2014/15 GP practices and providers in Southwark are expecting 3324 to have had a HHA and 900 will be supported by Case Management with an Integrated Care Manager. A further 360 people will be discussed at CMDT meetings.

Our intention is to roll this model out to cover younger adults with Long Term Conditions or complex needs.

We recognise that we have further work to do to establish joint comprehensive assessment processes between health and social care and in developing the role of care coordinators or accountable lead professional across Southwark services. We will take this work forward building on what has already been done at a CMDT level to establish trust and relationships, and moving forward our work on neighbourhood level integrated care over the course of the next twelve months. One barrier to joint assessments being undertaken is joint data system and having a shared care record, which professionals
can contribute to, being addressed through the data sharing workstream.

As part of the NHSE admission avoidance over 75s will now have a named GP and where appropriate a care co-ordinator. Additionally, as part of the local integrated care programme, all over 80s, those that are over 65 and housebound or haven't seen their GP for 15 months or more, will also be offered a Holistic Health Assessment and care plan. This assessment and care plan also shows the name of the professional undertaking the work and their contact details. On top of this anyone with more complex care, if they fall outside of the NHSE framework, will be supported by an Integrated Care Manager under the local Integrated Care Programme work.

GPs are at the centre of the local and national initiatives, supported to identify, assess and manage the needs of older and more complex people. In doing so they will be offered help, tools and guidance by the CCGs, local provider organisations and the local SLIC Integrated Care Programme. There are now contracts in place for the work, activity and outcomes expected, which have been jointly agreed by all parties. These targets and expectations are reported to a Governance Board each month which contains GPs, providers and commissioners.

iii) Please state what proportion of individuals at high risk already have a joint care plan in place

27% of high risk people (900) are subject to case management with a community multi-disciplinary team.
8) ENGAGEMENT

a) Patient, service user and public engagement

Please describe how patients, service users and the public have been involved in the development of this plan to date and will be involved in the future

The plan is underpinned by a vision for improving services in the community through better integrated working that has been developed over several years and shaped by a range of engagement activity.

Our integration project (SLIC), which has developed much of the thinking behind our approach has actively consulted with the public through its Citizen's Forum over the past 18 months. For example, Southwark and Lambeth commissioners, working with the SLIC team, held an engagement event with residents on the 28th January to identify what people wanted as outcomes from integration and to help us articulate those outcomes from a resident's perspective. This work supports our vision document, but will also help us as we work to further develop our local outcome measures for integrated care. This event included over 50 participants, including Healthwatch and the representatives of other engagement groups linked to the CCG and LA. The selection of our local metric (people feeling supported to manage their long term conditions) was informed by this engagement event.

Healthwatch have been closely involved through the various BCF and integration discussions at HWB, HWB workshops and CCG Boards and other events. The Director of Adult Care recently addressed a Healthwatch event on social services and integration plans.

There will be further engagement activity as detailed implementation plans for 2015/16 are developed.

The BCF has been discussed at the Older People's Partnership Board which includes strong user and voluntary sector representation, and the re-submission will be further discussed at its meeting on 24th September.

b) Service provider engagement

Please describe how the following groups of providers have been engaged in the development of the plan and the extent to which it is aligned with their operational plans

i) NHS Foundation Trusts and NHS Trusts

Our local acute trusts are key members of the Southwark and Lambeth Integrated Care (SLIC) programme and have been closely involved in producing and delivering the integrated care strategy to date, as well being involved in delivering some of the new integrated service models, for instance the admission avoidance programme. A workshop on integration was held in November 2013 including representatives of our main health providers, which helped us establish the vision and narrative for integration
which underpins our plans for the Better Care Fund (BCF).

Representatives of our main health providers were invited to the HWB seminar in February which agreed the vision for integration and priorities for investment from the fund.

Our detailed proposals for integration in Southwark, including the schemes to be funded from the BCF, have been shared and discussed with acute providers in a number of fora including; the Health and Well Being Board integration and BCF workshop on the 6th February, SLIC meetings and a Southwark and Lambeth joint planning meeting which includes CCG and Local Authority commissioners as well as representatives from our local providers (GST, KCH and SLAM).

Assumptions about acute activity reductions resulting from integrated care are also being agreed as part of the contracting round for 2014/2015. These reductions underpin Southwark CCG’s overall acute QIPP requirements and have been shared with providers, both in the CCG’s commissioning intentions and in more specific contractual negotiations.

Service providers have also been active participants in a number of change programmes and consultations that together help form our local integration programme. For instance, Social Care providers have been involved in My Home Life and other quality initiatives that form part of this wider plan, including the development of the re-ablement service model and home care redesign.

There will be further engagement activity as detailed implementation plans for 2015/16 are developed.

Our commissioning intentions document highlights the impact of BCF.

The provider commentary in Annex 2 shows that King’s College Hospital and Guy’s and St Thomas’ Hospital agree to the emergency admissions reductions targeted by the BCF plan.

ii) primary care providers

As per acute providers as set out above, our primary care providers are CCG council members and key members of the SLIC programme which has shaped our approach to integration which has shaped the BCF.

See also 6(c) on alignment with primary care plans.
iii) social care and providers from the voluntary and community sector

Social Care has been closely involved in the BCF preparations and the wider integration agenda from the outset. The SLIC Sponsor Board includes the Strategic Director of Children’s and Adults services. The SLIC Operations Board is jointly chaired by the Director of Adult Care and there is a provider group workstream which includes the Director of Adult Care representing social care from the provider perspective.

Community Action Southwark, representing the voluntary sector, are represented on the Health and Wellbeing Board and have been involved in the development of the BCF as a result. Partnership Boards all include voluntary sector representation and integration is frequently on the agenda. The Older People’s Partnership Board received a report on the April submission and are due to received an update on the re-submission on the 25th September.

We have engaged with providers and the community sector in a focussed way on specific BCF themes, for example a detailed consultation on the carers strategy, home care quality etc, and will continue to do so as plans are implemented.

In Southwark there is an Early Action commission looking at the role of the voluntary sector in the prevention and care agenda. This will include the services funded from the £910k BCF budget for community support services delivered by the voluntary sector for info and advice/befriending services and how we need to ensure these fully contribute to the overall outcomes for the BCF.

c) Implications for acute providers

Please clearly quantify the impact on NHS acute service delivery targets. The details of this response must be developed with the relevant NHS providers, and include:
  - What is the impact of the proposed BCF schemes on activity, income and spending for local acute providers?
  - Are local providers’ plans for 2015/16 consistent with the BCF plan set out here?

The impact of our plan on NHS services will mean:

1. Expanded community based admission avoidance and discharge support services, preventing emergency admissions and reducing length of stay
2. Support for 7 day working from integrated social care and community services, which will enable more efficient discharge processes and shorter hospital stays
3. Extended access to primary care, 7 days a week, supporting improved health outcomes for local people and reduced reliance on urgent care services/A&E
4. More support to keep people living independently in their own homes, including self management support, telecare, increased community mental health services and better quality home care

Savings will be realised in acute hospital services, largely at Kings College Hospital and Guys and St Thomas NHS Foundation Trusts. Savings will come, primarily from
reductions in emergency admissions and readmissions and shorter length of stays, as well as lower A&E attendances and reduced elective cancelations. The details of these savings are being agreed with providers both as part of our contractual negotiations and QIPP plans, but also through the SLIC programme, in terms of agreeing financial shifts across the health economy to support integrated care.

It should be noted that Southwark and Lambeth’s main acute providers, Guys and St Thomas NHS Foundation Trust, and Kings College Hospital NHS Foundation Trust, are tertiary providers covering a large geographical catchment area, and the proportion of their work relating to the two boroughs is less than 50%. Although Southwark is an important local referrer and partner to the two hospitals in the integration programme, the impact on our providers of changes to local demand is not as significant as it would be for district general type hospitals.

Within our local acute providers, capacity will be rebalanced to reflect the reduced use of emergency services by Southwark people. This will be through a combination of increasing the amount of tertiary work undertaken, through specialised services growth and consolidation, as well as bed reductions in some acute medical and older people’s wards. This rebalancing of capacity will be agreed and tracked through the SLIC programme.

There are two key risks for acute providers:

1) That the bed savings do not materialise, in which case there would be a cost pressure within the local health economy. We are seeking to mitigate this in a number of ways:
   - Proactively taking acute capacity out of service as the new integrated capacity is developed, or redeploying capacity in the community
   - Performance managing the integration programme to deliver agreed benefits, and holding partners in the system to account through the SLIC structures
   - Entering into risk management agreements between commissioners and providers
   - Evaluating the impact of the overall integration and admission avoidance programme, and amending components of the programme where there is shown to be low impact or less value for money

2) That the programme does release acute capacity, but this is not taken up by more profitable specialised activity. In this case there would need to be rationalisation of total acute capacity and reductions in fixed costs to create efficiencies.

The impact on service delivery targets if savings and activity reductions do not materialise would include pressures on emergency capacity, leading to pressures on A&E performance and possibly also referral to treatment times for elective work. However, the comment re the proportion of our FTs’ activity which relates to Southwark patients means that this impact is diluted by other demand and volume of activity from other commissioners, including other boroughs and NHS England specialist work.

In Annex 2 there is a copy of the signed agreement from King’s College Hospital and Guy’s and St Thomas’ Hospital to the emergency admissions reductions targeted by the BCF plan.
ANNEX 1.1 Detailed Scheme Description - scheme 1 - Existing NHS transfers:

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td>Existing NHS transfers: range of social care services that support health. Includes protection of adult social care services that have a health benefit. To be reviewed over 2014/15 along with other existing schemes to ensure best integrated approach</td>
</tr>
</tbody>
</table>

What is the strategic objective of this scheme?

This scheme covers a range of services currently funded by historic NHS transfers which were all invested with the aim of protecting social care services of benefit to health - with a particular focus on discharge support, intermediate care, carer support, maintaining eligibility, reablement, mental health, community equipment and telecare. The overarching objective is to help ensure that people are supported to live safely at home, preventing admission to hospital or care homes, and if admitted are well supported following discharge from hospital, avoiding re-admission to hospital.

As these resources are pooled in the Better Care Fund in 2015/16 there is an opportunity to review and rationalise these services during 2014/15 guided by the overarching objectives of the Better Care Fund and the local vision for integration.

Overview of the scheme

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

The current services funded in this way are as follows:

<table>
<thead>
<tr>
<th>Service</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Hospital Discharge Teams North and South – contribution to core costs</td>
<td>£1,200,000</td>
</tr>
<tr>
<td>2. Re-ablement – contribution in addition to re-ablement grant</td>
<td>£300,000</td>
</tr>
<tr>
<td>3. Carers – contribution to overall costs of Carers services</td>
<td>£400,000</td>
</tr>
<tr>
<td>4. Intermediate Care - Home Care Package costs – contribution to costs</td>
<td>£900,000</td>
</tr>
<tr>
<td>5. Mental Health – personal budgets for CMHT clients</td>
<td>£600,000</td>
</tr>
<tr>
<td>6. Learning Disabilities – contribution to home care / personal budgets costs</td>
<td>£211,000</td>
</tr>
<tr>
<td>7. Community equipment – ICES</td>
<td>£400,000</td>
</tr>
<tr>
<td>8. Telecare – contribution to cost</td>
<td>£100,000</td>
</tr>
<tr>
<td>9. Protect Adult Social Care – contribution to budget reduction target enabling services to be protected and eligibility maintained</td>
<td>£1,510,610</td>
</tr>
<tr>
<td><strong>Total (per BCF plan)</strong></td>
<td><strong>£5,621,000</strong></td>
</tr>
</tbody>
</table>
1.1 Hospital Discharge Teams – contribution to core costs - £1.2m

The 2 Hospital Discharge Teams, based at King’s College and St. Thomas hospitals, offer a vital frontline service facilitating safe discharge for residents who are eligible for social care and are inpatients within a hospital ward. They provide multidisciplinary assessment screenings for adults requiring support on discharge from hospital including ICT, Re-ablement and Care home placements, CHC and advice and information regarding universal and voluntary sector services and undertake safeguarding alerts and investigations.

As well as ensuring continued low rates of delayed discharge the service plays a key role in reducing emergency re-admissions by supporting safe discharge processes, and reducing the need for care home placements.

1.2 Re-ablement: £0.3m

This is a further contribution to the total cost of re-ablement alongside the main re-ablement grant – see scheme 3 for details.

1.3 Carers services: £0.4m

A contribution to cost of carers services (respite breaks etc) which will be used to take forward the Carers Strategy alongside new investment in 2015/16 from the BCF (see scheme 10 and 13).

1.4 Intermediate Care - Home Care Packages – contribution to costs £0.9m

This is the cost of care packages commissioned via the Intermediate Care service.

1.5 Mental Health personal budgets for CMHT clients £0.6m

Personal budgets for community mental health team service users on CPA to obtain tailored support services to help them live safely and independently at home. May be used to obtain diverse range of support including personal assistants, peer support, day activities as well as traditional services such as home care. Approach being developed alongside Personal Budgets for health – national pilot site.

1.6 Learning Disabilities home care £0.211m

Contribution to funding support for people with learning disabilities via personal budgets to enable them to live safely at home and avoid admissions.

1.7 ICES: £0.4m

Contribution to funding of ICES contract providing equipment that helps people live safely at home etc. e.g. wheel chairs. Essential service for supporting hospital discharge.

1.8 Telecare: £0.1m

Contribution to cost of alarms scheme and specialist equipment such as sensors to enable people to live safely at home. Will be expanding in 2015/16 so that more partners agencies can access the service directly (see scheme 9 for new telecare investment).
### 1.9 Protect Adult Social Care – maintaining eligibility - £1.5m

Contribution to previous year’s budget reduction target enabling services to be protected and eligibility maintained.

The way these current services will work in a more integrated model under the Better Care Fund is being developed as part of the SLIC programme. The guiding principles behind the model are:

- Integrated discharge support, re-ablement, intermediate care, joined up with admissions avoidance and enhanced rapid response service model.
- Integrated multi-disciplinary teams organised on a neighbourhood basis assessing need and accessing the services funded in pooled budgets, including case management and care co-ordination
- Personalised assessment and support planning process to deliver individual outcomes
- Whole system outcomes improved including BCF and wider measures
- Enhanced support to carers in line with Southwark’s Carers Strategy

The main cohorts being targeted are a) vulnerable older people and people with disabilities and/or long term conditions discharged from hospital or at risk of admission. b) carers, c) all people eligible for social care services d) people with mental health issues.

#### The delivery chain

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The local authority employs staff in the provision of social work and other services, or commissions providers of community based support including re-ablement/ ICT home care, carers support and ICES/ telecare services. A number of services are delivered by personal budgets in which the service user exercises choice and control over the provider delivering the support plan, including personal assistants and home carers.

#### The evidence base

Please reference the evidence base which you have drawn on

- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

National evidence of effectiveness of social services in following areas, as well as existing performance data on current services for:

- Hospital discharge
- Re-ablement and Intermediate Care
- Carers
- Mental health and learning disability personal budgets
- Community equipment
- Telecare
- Maintaining eligibility criteria

These services are in place and delivering outcomes at present, for example strong...
delayed transfers performance. By taking a more integrated approach to these services through the BCF it is anticipated that effectiveness can be increased in line with national evidence.

**Investment requirements £5.621m (see above)**

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

These schemes play a key role in driving good performance on non-elective acute admissions and re-admissions, delayed transfers of care, enhancing effectiveness of reablement/ICT, promoting independence and quality of life of people eligible for social services, improving user feedback and preventing people needing more intensive services. For example: Delayed discharges are currently a strong area of performance, with a firm top quartile position. Care home admissions are declining in line with targets in 14/15. Growing numbers receiving intermediate care or re-ablement upon discharge from hospital (105 in August), and measures of effectiveness are improving in terms of people staying at home for longer.

See annex 1.20 on contribution to non-elective admissions target.

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

The Adult Social Care performance framework provides range of information on outcomes from services, including activity and performance, which will be drawn into the BCF monitoring reports.

CCG emergency admissions and re-admissions monitoring reports will be used in the BCF reporting.

**What are the key success factors for implementation of this scheme?**

Current schemes already implemented. Review of schemes as part of wider BCF to be completed to further integrate and rationalise approach in line with overall vision, in particular by developing simplified discharge and multi-disciplinary working at the neighbourhood level.
ANNEX 1.2 – Detailed Scheme Description: Winter pressures grant funded services

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td>Winter pressures grant funded services: additional social work input to support discharge &amp; admissions avoidance: mental health re-ablement, enhanced rapid response, care home support, OT, re-ablement 7 day working, &amp; Nightowls overnight care. Previously funded from Winter Pressures funding.</td>
</tr>
</tbody>
</table>

**What is the strategic objective of this scheme?**

To relieve the pressure on the acute sector through provision of additional discharge support social services and management support, intermediate care, mental health re-ablement, enhanced brokerage support and 7 day working for intermediate care. The largest area of expenditure is on the Night Owl service which provides intensive overnight home care support to prevent the need for hospital or care home admission.

**Overview of the scheme**

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

The schemes under this heading were funded from Winter Pressures funding that ceased in 2012/13, then funded in 2013/14 from reserves. These are now being funded from the Better Care Fund as a long term source of funding.

<table>
<thead>

<tr>
<td><strong>Total</strong></td>
<td><strong>£1,192,707</strong></td>
</tr>
</tbody>
</table>

(Adjusted for contribution from reserves = £1,048,000)

**2.1 Mental Health Re-ablement (team 1) : £151,632**

One team manager and 3 social workers supporting the mental health re-ablement function, restoring people’s independence with short term rehabilitative services (link to scheme 1.7). There were 224 clients 13/14 completing re-ablement (13 week rehab service). Good evidence of effectiveness. (see also scheme 1.7)

**2.2a Hospital Discharge (team 2): £187,336**

Additional social work and management capacity to support the KCH and St Thomas’s
hospital discharge teams. Consisting of 1 team manager and 3 social workers. Objective to support the 2 hospital team managers to focus on designated priorities including the development of integrated working.

2.2b  Broker to support hospital discharge: £53,117

Expansion of the brokerage service with dedicated capacity to provide priority and speedier response to hospital discharge requirements (packages and placements).

2.3 Team 3 – Enhanced Rapid Response - £230,606

Social work contribution to enhanced rapid response service - see scheme 11

2.4a  Supported Discharge – team 4:  £186,450

The team works with clients in their home to improve their functioning and mobility to support them remaining in the community, reduce hospital admissions and reduce dependence upon long term care. Supported Discharge supported 572 users in 2013/14 at home. Of this, 88% in 2013/14 were at home 91 days after discharge. 75% of users on 2013/14 finished their time on the scheme with less or nil ongoing care services.

2.4b  Supported Discharge – intermediate care weekend working: £51,113

Support the discharge home from hospital clients on the weekend who have already been assessed and agreed for weekend discharge. Part of wider 7 day working investment (see scheme 18).

2.5  Night Owl Service: £322,453

The night owl service is delivered through two pairs of mobile night-time homecare workers working across Southwark from 22:00 to 07:00, seven nights per week 365 nights of the year. Scheme expanded following successful pilot in 2013, viewed as contributing effectively to admissions avoidance (hospital and care home).

2.6 Age UK Foot and Nail Care Services (Happy Feet) : £10,000

Toe-nail cutting service for older people providing home and clinic appointments in order to maintain mobility and reduce falls to avoid acute and more costly interventions. Reduces pressure on formal Podiatry services. Approx 850 toe nails cutting appointments annually

2.7  Change management support – £12,947

Following up on discharge consultancy work, focus on continuing care.

The delivery chain
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The local authority employs staff in the provision of social work and other services for the assessment and care management process to access services, and commissions direct providers of community based support.
**The evidence base**
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

These services are in place and delivering outcomes at present. By taking a more integrated approach to these services through the BCF it is anticipated that effectiveness can be increased in line with national evidence.

The Mental health re-ablement team is an innovative model with strong indications of good outcomes.

The Night Owl services is established and considered locally to be a useful resource for admission avoidance. Demand for the service has led to an increase in volume.

**Investment requirements : £1.048m**
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

These schemes play a key role in driving good performance on delayed transfers of care, non-elective acute admissions and re-admissions, enhancing effectiveness of reablement/ICT, promoting independence and quality of life of people eligible for social services, improving user feedback and preventing people needing more intensive services. For example: Delayed discharges are currently a strong area of performance, with a firm top quartile position. Care home admissions are declining in line with targets in 14/15.

The schemes also make a contribution to 7 days working, e.g. Intermediate Care scheme 2.4.

See annex 1.20 on contribution to non-elective admissions target.

**Feedback loop**
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Adult Social Care Performance framework provides range of information on outcomes from services.

Emergency admissions monitoring.

Night owl contract monitoring.

**What are the key success factors for implementation of this scheme?**

Current schemes already implemented. Review of schemes as part of wider BCF to be completed to further integrate and rationalise approach in line with overall vision, in particular by developing simplified discharge and multi-disciplinary working at the neighbourhood level.
ANNEX 1.3 – Detailed Scheme Description - Re-ablement

<table>

<tr>
<th>Scheme ref no.</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Scheme name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Re-ablement: grant rolled forward, services to be reviewed and further integrated with discharge support, admissions avoidance and enhanced rapid response. Used to expand reablement in line with council plan targets.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>What is the strategic objective of this scheme?</th>
</tr>
</thead>
<tbody>
<tr>
<td>To support people to regain their independence and minimise their long term care needs.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Overview of the scheme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please provide a brief description of what you are proposing to do including:</td>
</tr>
<tr>
<td>- What is the model of care and support?</td>
</tr>
<tr>
<td>- Which patient cohorts are being targeted?</td>
</tr>
</tbody>
</table>

The Re-ablement team work to support an individual to regain skills, confidence and independence, often following a specific period of illness or injury and hospital admission. It is a key service for supporting safe discharge from hospital and preventing admissions or re-admissions to hospital of people at risk, and reducing the need to use care homes.

The services is provided as a short-term, intensive alternative in the persons home, usually for up to 6 weeks (although can be less, dependent on goals achieved or appropriateness to the service). The team can provide short term care and support or assistive equipment to increase independence/safety with activities of daily living, transfers, and improving confidence.

The team receive referrals from the community support teams as well as hospital discharge services.

The model of care of care is well established nationally and expanding re-ablement services is a key strategy nationally and locally to improve outcomes for people with care needs.

Following re-ablement an assessment of long term care needs is made. If there are eligible long term needs these are subject to a support planning process and personal budget allocation, enabling people to exercise choice and control over the long term services they receive.

The Occupational Therapists and Social Care workers within the team assess the users at home, and set goals to improve their independence and functioning, and draw up a package of care including input from specialist reablement homecare providers. The current provider BS Homecare is co-located with the team to enhance effective communications.

The Southwark Re-ablement Team consists of 9 Social Workers, 6 Occupational Therapists, and 3 Assistant Practitioners.
The service is also the default assessment service for Southwark, and combined with the Supported Discharge Team facilitates 70% of all discharge from hospital.

In 2013-2014 Southwark Re-ablement supported approximately 1200 Southwark residents. Of these, approximately 89% of the hospital discharges have been supported to remain at home 91 days after discharge into re-ablement.

69% of people receiving Re-ablement exit the service with a lower or zero care package.

Prior to the full commencement of the Better Care Fund there will be a review of how best to deliver re-ablement services in a way that is more integrated in line with the development of the overall integrated service model. Integration with related services such as Intermediate Care and Enhanced Rapid Response, and linkages with the neighbourhood multi disciplinary team approach will be considered. Taking into account the SLIC projects, Neighbourhood model and Integration Agenda – we will be looking at ways that the Re-ablement service (with Supported Discharge) could support discharges from hospital sooner, and provide additional support to higher acuity patients.

**The delivery chain**
- Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

Adult Social Care services are responsible for providing the re-ablement service. The social work and OT assessment and care management input is provided by directly employed social workers whilst specialist independent reablement home care providers are commissioned by the local authority. In addition to the existing key provider (BS Homecare) there is an ongoing procurement process for the Re-ablement/Intermediate Care/Neuro Rehab services to appoint 2 new providers in 2015.

**The evidence base**
- Please reference the evidence base which you have drawn on
  - to support the selection and design of this scheme
  - to drive assumptions about impact and outcomes

There is a growing national and local evidence base for the effectiveness of re-ablement services. The local model of services is in line with best practice approaches as set out, for example, in Social Care Institute for Excellence research and guidance on re-ablement. Further refinements to the model will be made on an ongoing basis.

**Investment requirements £1.8m (from re-ablement grant)**
*Note: the re-ablement grant is supplemented by £0.3m of the s256 funding in scheme 1.*

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
- Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
- Please provide any further information about anticipated outcomes that is not captured in headline metrics below

The re-ablement service is anticipated to have a major impact contributing to the system
wide targets to reduce delayed transfers of care, reduce care home admissions and reduce hospital admissions and re-admissions. There are specific targets on re-ablement effectiveness in the BCF which the service is directly responsible for.

In 2013-2014 Southwark Reablement supported approximately 1200 Southwark residents (1800 total Reablement/ICT).

Approximately 89% of the hospital discharges into re-ablement have been supported to remain at home 91 days after discharge. 69% of people receiving Re-ablement exit the service with a lower or zero care package.

See annex 1.20 on contribution to non-elective admissions target.

<table>
<thead>
<tr>
<th>Feedback loop</th>
</tr>
</thead>
<tbody>
<tr>
<td>What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?</td>
</tr>
</tbody>
</table>

There is an established performance monitoring scorecard for the re-ablement service which highlights activity in term of referrals, service users, duration, completions and outcomes. This will feed into BCF monitoring.

<table>
<thead>
<tr>
<th>What are the key success factors for implementation of this scheme?</th>
</tr>
</thead>
</table>

The scheme is operating successfully. Continued success will be dependent on maintaining assessment capacity and provider capacity to meet demand from referrals in a timely way, and developing services in a more integrated way in line with the integration programme.
ANNEX 1.4 – Detailed Scheme Description – service development

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td>Service development: Change management capacity. (2014/15 and 2015/16)</td>
</tr>
<tr>
<td><strong>What is the strategic objective of this scheme?</strong></td>
<td>To ensure programme management resources support the delivery of the BCF.</td>
</tr>
</tbody>
</table>

**Overview of the scheme**

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

The CCG is to recruit programme management support to help deliver the Better Care Fund plan. The employee will be employed and line managed within the CCG but jointly accountable to the Director of Social Care. Key workplan goals to be agreed by Director of Service Redesign of CCG, and Director of Adult Care of the Council.

The role includes making an effective link between the BCF and the wider integration agenda.

**The delivery chain**

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The CCG will establish, recruit to and manage a new senior post “Programme Manager – Integration and Better Care Fund”. The budget includes an element for related costs.

**The evidence base**

Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

n/a – enabler for BCF implementation

**Investment requirements  £100k**

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

This change management capacity is an essential enabler for the programme of schemes and its associated benefits.

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Through the line management process monitoring against workplan goals will be undertaken.
A brief quarterly report on progress against the planned goals to be provided by the programme manager and any issues regarding the effectiveness of the role can be discussed between the CCG and council if any concerns are raised.

**What are the key success factors for implementation of this scheme?**

Successful recruitment of programme manager and ongoing management support from partners to enable the role to be effective.
### ANNEX 1.5 – Detailed Scheme Description – Self-management

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td><strong>Self-Management Support</strong></td>
</tr>
<tr>
<td><strong>What is the strategic objective of this scheme?</strong></td>
<td>To enable Southwark residents with long term health conditions to keep themselves well and increase their levels of independence.</td>
</tr>
</tbody>
</table>

#### Overview of the scheme
Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

For Southwark residents living with long term health conditions contacts with health and social care services make up only a very small proportion of their daily life. The larger part is spent managing their condition(s), drawing on their own resources and those available in the wider community.

#### 2014/15 (£107,000)
Funding focuses predominantly on commissioning self-management support to ensure that patients in Southwark living with a long term condition(s) have the knowledge, skills and confidence to manage their condition effectively in the context of their everyday life. Projects include:

- **Face to face generic & Carer Self-Management Courses**  
  Lay led self-management courses help anyone living with any long-term condition to learn new skills to better manage their condition. Courses will also be adapted for adults who care for someone with a long term condition, and for people living with, or in recovery from, a mental health condition. 13 courses to be delivered in 14/15 (8 generic course, 3 adapted mental health courses, 2 carers courses)

- **Online Self-Management Course**  
  Pilot an internet based self-management programme for people with long term conditions in Southwark. This will provide choice to patients to either attend a face to face programme or an online course.

- **Living with Diabetes Self-Management Course**  
  6 week programme which enables people living with diabetes to develop and improve their skills and knowledge to manage their own health. (4 courses to be delivered in 14/15, each course 6 weeks with capacity of 15 places per course).

- **Printing of Diabetic Self-management Pack**  
  Self-management pack was developed by the Diabetes Modernisation Initiative (DMI) and co-produced by local diabetes teams and patient groups. The initiative aims to give everyone living with diabetes in Southwark information about what care they need and how to access it locally. 12,000 packs to be printed in 14/15 and distributed to GP practices via the Diabetes Community Service.
- **COPD Patient Passports**
  The passport empowers patients to engage in self-care interventions that can release value. The British Lung Foundation promotes use of the passport to support self-care. 4,000 to be printed in 14/15 and distributed to practices to provide to patients on the COPD register.

- **Inhaled Corticosteroid Safety (ICS) Information**
  Developed by the London Respiratory Team and aims to enhance the ability of patients with respiratory conditions to manage their intake of Inhaled corticosteroid agents. 5,000 cards to be distributed to GP practices to provide to patients on inhalers.

**2015/16 (£307,000)**
2015/16 funding will be used to continue to fund the self-management courses where evaluation has shown demand for the service and effectiveness. Additionally, gaps in self-management provision, for example, support for COPD patients in early stages of their disease will be the focus of funding. The second year of funding would build on this by taking a community asset based approach to support individuals to feel more confident and motivated to manage their condition(s). Community and self-help groups can often provide the type of support required by people with long term conditions. Examples include cookery classes to help those struggling to eat a healthy diet, gardening projects to encourage physical exercise, volunteering befriending schemes to combat social isolation and loneliness, peer-led self-help groups and locality/neighborhood community champions.

**The delivery chain**
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The Integrated Commissioning Directorate of Southwark CCG will lead on commissioning.

The face to face self-management courses (generic/carers/mental health) will be delivered by Self-Management UK. The pilot online course will be delivered by Self-Management UK. Living with Diabetes is provided by Guys and St Thomas’s Community Services (GSTT)

**The evidence base**
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

The evidence base for the face to face self-management programmes, including courses commissioned from Self-Management UK and GSTT comes from the national evaluation of the Expert Patient Programme which showed that self-management courses significantly improve the quality of life for people on the course and that an average cost saving of around £1800 per person is achieved.

The evidence base for running an internet based self-management programme for people with long term conditions in Southwark comes from the evaluation of an online self-management programme (EPP online) for England residents with long term conditions (Lorig et al, 2008). The study found that the peer-led online programme appears to decrease symptom, improve health behaviours, self-efficacy and satisfaction
with the healthcare system and reduce health care utilisation up to 1 year post intervention.

**Investment requirements:** £107k in 14/15, £307k in 15/16
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

- Reduction in emergency department visits and admission avoidance due to improved health behaviours and increase in confidence to manage own condition(s) appropriately.
- More appropriate healthcare utilisation
- Decreases in symptoms and improvements in health related behaviour
- Increase in patients confidence, skill and knowledge to manage their condition
- Increase in satisfaction with health care services
- Improved quality of life

See annex 1.20 on contribution to non-elective admissions target.

**Feedback loop**
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Self-Management courses commissioned from Self-Management UK will be reported on using the HeiQ (Health Education Impact Questionnaire). The HeiQ is the name of a questionnaire that is handed out to participants before they start a course, and again once they have completed a course. The data collected then allows for a comprehensive evaluation to be produced and reported on. The following areas will be reported on:

- Positive and active engagement in life
- Health directed behaviour
- Emotional well-being
- Self-monitoring and insight
- Constructive attitudes and approaches
- Skill and technique acquisition
- Social integration and support
- Health service navigation

Both patient reported satisfaction and patient reported outcomes, i.e how support patient feels in managing their condition and/or how confident a patient feels in managing their condition, will be collected for the Living with Diabetes service.

**What are the key success factors for implementation of this scheme?**

GPs signposting patients to the self-management programmes available. Action required to ensure that health care professionals and practice managers are aware of the service and are committed to directing patients to self-refer to the programmes. Ensure that referral processes are accessible and simple for patients to navigate.
ANNEX 1.6 – Detailed Scheme Description – home care quality

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>1.6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td>Home Care Quality Improvement - Transforming home care into a new integrated community support offer: improving quality and effectiveness of home care, with links to clinical and medical support – ensuring a strong local community offer, tailored to the overall health and social care needs of individuals.</td>
</tr>
</tbody>
</table>

What is the strategic objective of this scheme?

To improve the quality and effectiveness of homecare services by investing in the workforce and improved levels of provision that will better enable people to live safely and healthily at home.

Overview of the scheme

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

Southwark Council and NHS Southwark CCG will commission an integrated community support service from July 2015. This service will supersede the current homecare approach. The service will provide high quality care and support for those with a care need. The service will also be able to draw on clinical and health expertise to meet whole-person health and care needs, support a reduction in hospital and care home admissions and support independent living for those in receipt of the service.

Model of care and support

Southwark integrated community support (ICS) will be commissioned on the basis of the following strategic commissioning principles. The commissioning strategy principles are set out within the partnership framework of the Southwark Health and Wellbeing Board’s Better Care, Better Quality of Life vision for the integration of health and social care services.

More care in people’s homes and in their local neighbourhoods

- The ICS will be commissioned on a neighbourhood basis, enabling care and other support workers to be better linked into the communities in which they work.

Person-centred care, organised in collaboration with the individual and their carers

- The ICS will place those who are in receipt of care at the heart of the commissioning and procurement process – helping to shape and design the service that they will receive, and to assess its effectiveness in meeting individual needs

Better experience of care for people and their carers

- The ICS will have safety as its core, ensuring at all times that a high quality service is commissioned that provides continuity of care and helps people to stay safe from
harm.

- The ICS will be underpinned by the *Southwark ethical care charter*.

Population based care that is pro-active and preventative, rather than reactive

- The ICS will be a core part of, and link with, *wider community based support*, that combats social isolation and promotes community engagement

Better value care and support at home, with less reliance on care homes and hospital based care

- The ICS will support and *further enable the shift in the balance of care* in Southwark from residential settings to community based support and independent living.

Less duplication and ‘hand-offs’ and a more efficient system overall

- The ICS will ensure there are *links across to other services* and expertise, including primary care, reablement and intermediate care. In doing this the service will avoid a situation where those in receipt of care can have multiple visits from different organisations from across the health and social care system.
- The ICS will connect and collaborate with *community health services*, linking with the local health neighbourhood model.

Improvements to key outcomes for people’s health and wellbeing

- The ICS be focused and monitored on the *basis of real outcomes* of those who receive care, with wellbeing as well as health and care outcomes at its core. This will help ensure that people leading fulfilled lives, connected to their own communities, and not prohibited from leading independent lives, is a key part of the service.
- The ICS will be commissioned on a *long-term basis, creating a strategic relationship* with the future service providers. It will provide greater certainty to those who receive care - whilst, at all times, ensuring providers are held to account, and share the risk, of any contracting issues.
- The ICS will also embed the following cross-cutting issues, that is support of stronger, more resilient communities and Southwark as a great place to live and work at the heart of the service.

<table>
<thead>
<tr>
<th>The delivery chain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved</td>
</tr>
</tbody>
</table>

The current homecare service is commissioned by Southwark Council. The two core contracted providers of this service are LondonCare and MiHomecare.

The ICS will be commissioned by Southwark Council, with input and support by NHS Southwark CCG.

<table>
<thead>
<tr>
<th>The evidence base</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please reference the evidence base which you have drawn on</td>
</tr>
<tr>
<td>- to support the selection and design of this scheme</td>
</tr>
<tr>
<td>- to drive assumptions about impact and outcomes</td>
</tr>
</tbody>
</table>
The Council and CCG in Southwark have drawn on local social care and health demographic, performance and other information, including the statistical and technical work on the opportunities from integration in this area led by the Southwark and Lambeth Integrated Care (SLIC) pilot. Feedback from those in receipt of services has also consistently expressed a desire that the support and care that they require should be based in their own homes and communities. All of this work, setting out the scale of joint health and social care need in the community, underlies the model that has been developed.

User satisfaction with home care as reflected in the national user survey is lower in Southwark than comparable London boroughs, which adds support to the view that home care quality is a key issue in Southwark.

**Investment requirements £1.9m**

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

| Improved quality and effectiveness of homecare in the context of an integrated approach to community support is expected to have an impact on the full range of Adult Social Care Outcomes Framework measures as well as health measures such as A&E attendance and emergency admissions and re-admissions. In particular, positive benefits are anticipated in user satisfaction with services, and other user reported outcomes from the social care user survey and GP survey. Improved support to help people live independently at home will help achieve the objective of preventing, reducing and delaying the need for more intensive care and support and promote a personalised approach. |

See annex 1.20 on contribution to non-elective admissions target.

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

The council’s performance data, including user survey results, will enable key outcomes to be monitored. Southwark Councils’ contract monitoring team will measure key metrics, including both health and social care outcomes. Individual service user reviews will enable the council to monitor the extent to which services are helping them deliver their support plan objectives.

**What are the key success factors for implementation of this scheme?**

It is recognised that to increase the quality of current home care services more needs to be invested in the workforce, including tackling basic issues like building in and being paid for travel time, sickness pay, training and living wages - as well as allowing for more intensive homecare packages where necessary. This is a potentially large investment at a time when resources are reducing. The contribution from the BCF is therefore crucial, as will be identification of council resources in the budget process.
<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>7. (2014/15)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td><strong>Psychiatric Liaison</strong>: Reablement expansion in acute and mental health inpatient services</td>
</tr>
<tr>
<td><strong>What is the strategic objective of this scheme?</strong></td>
<td>Integrated reablement care pathway across acute and mental health inpatient services to facilitate earlier discharge and redirecting demand from urgent and unplanned care to community based services improving service user experience of the care and support they receive and to facilitate and maintain recovery and independence.</td>
</tr>
</tbody>
</table>
| **Overview of the scheme** | Please provide a brief description of what you are proposing to do including:  
  - What is the model of care and support?  
  - Which patient cohorts are being targeted? |
| | Currently a community based reablement service is offered to mental health service users following an episode of severe ill health or hospital admissions to regain skills which enable recovery and staying well. The programme is currently offered at the point of discharge, however the new model will extend this into acute and inpatients services to begin reablement earlier and increase the number of people offered reablement as part of their recovery plan. |
| | The service will be specifically aimed at those individuals who may otherwise require residential care or supported accommodation in order to be discharged from hospital. |
| | The scheme will provide the foundations for further enhancement of the reablement model across specialist mental and physical health services as part of the 15/16 BCF programme. The remainder of the 14/15 year will be spent integrating the model into existing services, developing processes and working with health professionals to include reablement as part of individuals recovery plans in preparation for 15/16 services becoming available. |
| **The delivery chain** | Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved |
| | The Local Authority will be accountable for the implementation and delivery of the scheme working in partnership with SLaM (our mental health trust) and the acute trusts to ensure effective implementation and integration of the resource. |
| **The evidence base** | Please reference the evidence base which you have drawn on  
  - to support the selection and design of this scheme  
  - to drive assumptions about impact and outcomes |
The independent evaluation of the reablement service shows a positive impact on the reduction of clients' needs as a result of the intervention with significant improvement in six of the outcome domains which are measured. Financial cost of care immediately after reablement decreases from an average of £104,378 to £61,997 with 65% of service users no longer FACS eligible following the intervention. Additionally, clients satisfaction is mostly positive with clients reporting they are happy about the care and support they received.

Proactive promotion and active consultation with health professionals has had a positive effect on identifying appropriate individuals to benefit from reablement with referrals increasing as a result of this approach. Service development reviews have also identified an opportunity to start reablement earlier to discharge people from hospital sooner. Integrating a reablement worker into hospital based inpatient services will further support increase in referrals and access to the service with support starting earlier to reduce delay in the transfer of care and support.

**Investment requirements £54k 2014/15** (2 reablement workers from September, seed funding £300k 2015/16 proposals)

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

- Increase in number of people referred to reablement service
- Reduction in levels of need
- Reduced transfer of care
- Improved patient experience of the care and support they receive
- Reduction in Occupied Bed Days
- Reduced re-admissions to hospital and care homes.

See annex 1.20 on contribution to non-elective admissions target

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Service user outcome data will be used to understand the impact of the service. Existing data mechanisms will identify the numbers and length of delayed discharge and reduction in OBDs.

On-going service evaluation and development with health and social care staff and service users to identify further opportunities or barriers to integrated mental health and social care

**What are the key success factors for implementation of this scheme?**

- Effective partnership working
- Clear understanding of the Social Care roles
- Clear reporting and supervision line for Social Care practitioners
- Recruitment of high quality staff able to work flexibly and in partnership with other professionals
ANNEX 1.7b (15/16) – Detailed Scheme Description – mental health (psychiatric liaison)

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>1.7b (2015/16)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td>Psychiatric Liaison: Integrated AMHP/SC professionals in psychiatric liaison and crisis care pathway</td>
</tr>
<tr>
<td>What is the strategic objective of this scheme?</td>
<td>Integration of social care expertise within the mental health crisis care pathway (Home Treatment Team and Psychiatric Liaison) to reduce unplanned admissions and facilitate earlier discharge reducing reliance on hospital based services. Enhancing the in ward mental health liaison across acute inpatient wards supports parity of esteem through integrating physical and mental health which is further strengthened by social care input delivering stronger person centred approach to care and support and improving people’s experience of the care and support they receive.</td>
</tr>
<tr>
<td>Overview of the scheme</td>
<td>Please provide a brief description of what you are proposing to do including: - What is the model of care and support? - Which patient cohorts are being targeted?</td>
</tr>
<tr>
<td>Integrate 6 AMHP/SC professionals across the Home Treatment Team and Psychiatric Liaison Service</td>
<td>Currently, the Psychiatric Liaison service gate keeps all mental health hospital admissions through responsive assessment, care planning and diversion offered 24/7 in A&amp;E and during core hours for inward liaison across acute and mental health inpatient services. 4439 referrals were accepted by the Psychiatric Liaison Team during 13/14 with 92% from A&amp;E. Wherever possible the service diverts people away from hospital based services and facilitates earlier discharge through engagement with community based services for example the Home Treatment Team (HTT) which provides specialist community based intervention for people in acute mental distress reducing the demand on urgent and unplanned hospital based care. The Home Treatment Team provided 774 episodes of care during 13/14. Further investment to the Psychiatric Liaison Service will support the delivery of the evidence based RAID model (Rapid Assessment, Intervention and Diversion) across urgent care and inpatient services. The inclusion of social care professionals, funded via BCF monies will support the delivery of more holistic, single assessments and discharge planning in A&amp;E and increased in reach capacity across acute hospitals and inpatients. In addition a specific reablement worker (funded through the 14/15 investment) integrated into inpatient services will begin reablement during inpatient stay supporting smoother transition and earlier impact of the intervention. Integrating AMHP/SC professionals into psychiatric liaison and Home Treatment Team</td>
</tr>
</tbody>
</table>
will expand the current health focused model to include a multidisciplinary approach to assessment, care and support planning for people in mental health crisis. Furthermore, SC professionals will provide care coordination for service users with significant social care needs ensuring appropriate Recovery and Support Planning across health and care pathways. Specifically the service will continue to focus on people at risk of crisis or in crisis reducing escalation of need wherever possible.

**The delivery chain**

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved.

The Local Authority will be accountable for the implementation and delivery of the scheme working in partnership with SLaM and the Acute Trusts to ensure effective implementation and integration of the resource.

**The evidence base**

Please reference the evidence base which you have drawn on to support the selection and design of this scheme.

The integrated approach is directly in line with the principles of the Mental Health Crisis Concordat to provide early intervention to reduce the likelihood of crisis, sufficient and high quality response for when someone is in crisis and services to support people to recover and stay well. The concordat recognises the high correlation between poor mental health and broader social factors for example family and relationships, housing and living environment, education and employment status and therefore encourages a systemic approach to ensuring not only the presenting behaviour but the underlying issues impacting on people’s poor health are identified and addressed resulting in more people recovering and stay well for longer.

The Emergency and Unscheduled Care Mental Health Sub Group continues to address the increasing MH presentations at A&E (target assessment rate of 200 exceeded every month), ensuring the most appropriate and streamlined pathway is followed for patients in crisis. (90% of admissions to SLaM inpatients come through A&E).

A number of interventions have impacted upon the numbers of mental health patients being seen in A&E such as enhanced Psychiatric Liaison Input at the front desk at A&E which resulted in 40% of patients being re-directed to more appropriate services. In addition Winter Pressures monies was also used to support London Quality Standards to ensure Specialist Clinician availability in A&E departments and test the impact of senior psychiatry presence in busiest times to provider better leadership across the department and ensure patient flow is directed in the most risk averse, clinically appropriate way. Increased specialist assessments which are therapeutically orientated were adopted resulting in increased numbers of direct discharge from Emergency Departments. The outcome of both interventions has resulted in a local commitment to provide on-going CCG investment to fund psychiatric input into Psychiatric Liaison duplicating the Birmingham RAID Model which has showed positive outcomes in reducing reliance on hospital based services, earlier identification of mental illness and earlier discharge from Acute and inpatient services. The increased investment from both the CCG and the BCF will also support increased in-reach across Acute hospital wards to further support early identification and discharge of people with physical and mental ill-health. By expanding the health model to also include a social systems approach delivering single assessment and discharge planning across the full spectrum of individuals needs it is predicted that more people can be diverted away of hospital based services and discharged earlier to
community based services.

To provide an effective alternative to accident and emergency departments and support earlier discharge, investment in the community based Home Treatment Team to expand the breadth of the current health based service to include specialist social care consideration, more people will be diverted away from urgent, unplanned and inpatient care. The Flash bed Audit undertook in May 2014 identified 40% of avoidable admissions could have been diverted via the HTT and 7% of service users who could have been discharged on the day of the audit home with HTT input. The additional investment will therefore support the individuals who could have otherwise be diverted from or discharged from inpatient care.

The scheme aligns to the second mental health focused scheme to provide multidisciplinary working in community based services supporting a strategic shift across all care pathways for integrated health and social care working around people with mental illness.

### Investment requirements

£300k

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

### Impact of scheme

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

- Improved recovery and staying well
- Reduction in unplanned and emergency admissions
- Reduced demand on hospital based services
- Earlier discharge
- Improve service user experience of the care and support they receive

See annex 1.20 on contribution to non-elective admissions target.

### Feedback loop

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Data currently provided through core contract reporting will be used to understand the impact of the scheme on the above areas including number of referrals successfully gate kept by psychiatric liaison, number and length of delayed discharge and reduction in OBDs.

Data gathered through the Unplanned and Emergency Care Mental Health Subgroup including the recently developed single scorecard of mental health activity across both EDs in the borough to provide greater understanding of activity across the wider system. This will continue to be used to understand the impact of the investment. On-going service evaluation and development with health and social care staff and service users will support qualitative review and evaluation of the scheme and support identification of further opportunities or barriers to improve the offer.

### What are the key success factors for implementation of this scheme?

- Effective partnership working, clear “memorandum of understanding” of the Social Care roles. Clear reporting and supervision line for SC practitioners
- Recruitment of high quality staff able to work flexibly and in partnership.
<table>

<tbody>
<tr>
<td>Scheme name</td>
<td>Multidisciplinary, community based mental health services</td>
</tr>
<tr>
<td>What is the strategic objective of this scheme?</td>
<td>Strengthen community based, multi-disciplinary working to reduce escalation of need and prevent crisis admissions through integrating, person centred services which foster a culture of recovery and staying well. The approach will provide joint health and social care assessments and single ‘accountable professional’ co-ordinating care of individuals improving people’s experience of the care and support they receive. Targeted at complex care groups including those who would otherwise require residential care, the reablement focused approach will support more people to live independently, reducing reliance on residential and nursing care.</td>
</tr>
</tbody>
</table>

### Overview of the scheme

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

The model will embed social care professionals, principles and evidence based practice across Community Mental Health Services to provide an integrated approach to care and support shifting the balance from hospital based services. Locally, the transformation of Adult Mental Health (AMH) Services is taking place over the next year providing more intensive, community based support for people out of hospital, moving from long term tracking to focused intervention, recovery and staying well. The BCF monies will be used to ensure a multidisciplinary approach through integrating social care into the new AMH model.

The enhanced, integrated community teams will provide effective care pathways for the Psychiatric Liaison and Home Treatment Team as part of BCF Scheme providing a strategic shift in the balance from hospital based services.

**Home care reablement:** providing a practical element to reablement to support earlier discharge from hospital and staying at home for longer

**Dual Diagnosis worker and data analyst:** interfacing with all parts of the system including criminal justice, social care, drug and alcohol and the Multi Agency Safeguarding Hub (MASH) the analyst and worker will identify complex cases and provide targeted input ensuring appropriate wrap around packages of care which engage and sustain recovery and staying well.

**Dialectical Behaviour Therapy (DBT) for vulnerable and at risk young people:** Integrated into Specialist Family Focus Team (SFFT) the resource will provide an evidence based intervention for vulnerable and at risk young adults who have had historical and on-going contact with the social care system. The resource will provide a trainer and practitioner to support building capacity across the social care system.
OT and reablement: two OTs for the Residential Care Transition Team (part funded by CCG and charitable trust funding for management capacity) focused on driving a culture change from the current residential care model to personalised packages of care and support using personal health and social care budgets for people in their own homes supporting more people to move on and live independently. Two OT/reablement workers integrated into the MAP treatment team and re-ablement service providing focused integrated into community mental health teams.

MH Housing Link Worker: To ensure appropriate accommodation is available, accessed and maintained for the people enableed to move on and live interdependently, including those with personal health and social care budgets or as an outcome of the PIE programme.

Primary Care Advanced Practitioners: an Advanced Practitioner for each of the localities (north and south) to provide mental health social workers and advanced practitioner as part of the locality model. To be developed with the locality model developments.

The delivery chain
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

Home care reablement: additional resource into the already commissioned home care provider by the LA

Dual Diagnosis worker and data analyst: LA delivered resource integrating into the MASH

Dialectical Behaviour Therapy (DBT) for vulnerable and at risk young people: CCG commission SLaM as part of the CAMHS contract, integrated into the LA delivered SFFT working alongside, managed and supervised by the Functional Family Therapy manager (part of SFFT)

OT and reablement: Delivered by the LA integrated into the residential Care Transition Team, Reablement Service (both managed by the LA and integrated into the MAP Treatment (SLaM)

MH Housing Link Worker: LA delivered service

Primary Care Advanced Practitioners: LA delivered service interfacing with the locality teams

The evidence base
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

There is a large body of evidence which recognises the impact of social, economic and environmental factors on people’s health and wellbeing. Adopting a recovery focus model requires focusing care on building the resilience of people with mental health problems, not just treating or managing their symptoms. An integrated health and social care model providing a fully personalised service provides a strong
foundation to implement a recovery focused model.

Embedding personalisation across the system supports the national and local agenda to provide choice and control to individuals over the care and support they received. Predominantly in the learning disability sector, but increasingly in mental health, there is an increasing evidence base that offering personal health and social care budgets provides maximum impact of the personalisation policy for individuals. Adopting personal health and social care budgets for people who would have otherwise required residential care provides a more efficient model of support significantly reducing the cost of care and ensures care and support is wrapped around the individual in their own home providing stability and responsiveness.

The reablement model has been adopted in Southwark for the last 2 years, with an independent evaluation showing a positive impact on the reduction of clients’ needs as a result of the intervention with significant improvement in six of the outcome domains which are measured. Financial cost of care immediately after Reablement decreases from an average of £104k to £62k with 65% of service users no longer FACS eligible following the intervention. Additionally, clients satisfaction is mostly positive with clients reporting they are happy about the care and support they received. Further integrating the reablement approach into Community Mental Health Teams will support the delivery of person centred care and support.

**Investment requirements £700k**
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

- Improved recovery and staying well
- Reduction in unplanned and emergency admissions
- Reduced demand on hospital based services
- Earlier identification and prevention of escalating mental illhealth
- Reduction in use of residential and nursing care
- Increase in people with mental health issues living independently
- Earlier discharge
- Improve service user experience of the care and support they receive

See annex 1.20 on contribution to non-elective admissions target.

**Feedback loop**
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Data currently provided through core contract reporting will be used to understand the impact of the scheme on the above areas. In addition the new dashboard which is being developed and adopted to monitor the impact of the Adult Mental Health transformation will provide insight into the impact and outcomes of the investment.

On-going service evaluation and development with health and social care staff and service users will support qualitative review and evaluation of the scheme and support identification of further opportunities or barriers to improve the offer.
What are the key success factors for implementation of this scheme?

- Effective partnership working
- Clear “memorandum of understanding” of the Social Care roles
- Clear reporting and supervision line for SC practitioners
- Recruitment of high quality staff able to work flexibly and in partnership with other professions
ANNEX 1.8b – Detailed Scheme Description - Enhanced Intervention Service for people with learning disabilities

**Scheme ref no.**
1.8b  Mental health (learning disability)

**Scheme name**
Enhanced Intervention Service for people with learning disabilities

**What is the strategic objective of this scheme?**

To provide additional community based support to people with learning disabilities and challenging behaviour, enabling them to live in the community rather than more intensive care settings.

This scheme forms part of Southwark’s strategic response to *Transforming Care: A national response to Winterbourne View Hospital*, DH, (2012), which includes a clear transformational agenda that:

- Services will be developed and strengthened locally so that individuals with learning disabilities displaying significant challenging behaviour can expect to be supported locally: and
- There is a reduction in the use of unnecessary out of area assessment and treatment unit placements, both in terms of numbers of admissions and length of stay.

**Overview of the scheme**
Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

This scheme builds on a Enhanced Intervention Service pilot scheme commissioned from the South London and Maudsley NHS Foundation Trust (SLaM). The key objectives are to:

- Work preventatively with local services to increase their capacity to create capable environments;
- Provide rapid, flexible, intensive assessment and intervention at the point of crisis or potential service / family breakdown; and
- Provide clinical leadership for planning and strengthening services for people returning to Southwark as well as additional clinical expertise to support step-down back from more restrictive environments.

**Eligibility criteria for the service:**

- Meeting the eligibility criteria for the MHLD service; i.e. presence of significant learning disabilities and mental health problems / and or significant challenging behaviour and over 18 years old.

(Consideration is being given to the benefits of MHLD’s involvement in
service planning with young people who are under 18 years old. This longer lead in time would strengthen the service planning process).

- At significant risk of placement breakdown, exclusion from services, admission to A&T unit and / or specialist out of area placement.

- Requires a significantly more intensive / rapid assessment and intervention in the community to enable them to maintain living locally.

- With presentations of co-morbidity, a predominant presentation of challenging behaviour to the crisis is identified.

- There is an expectation of cross agency support and commitment towards a multi-agency approach to managing crises.

The fast tracked referral process is through the MHLD referral route, with the aim to accept and respond to referrals within 24 hours (standard working days) aiming to hold a multi-agency network meeting held within 48 hours of the referral being accepted (where possible) to enable a co-ordination risk management plan, alongside intensive assessment and intervention.

The Enhanced Intervention Service input is time limited, has clear contracting and expected outcomes, and a pathway for step down to the existing MHLD for continuation of input once the crisis is over.

**The delivery chain**
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The permanent team will be jointly commissioned by Southwark CCG and Southwark Council. As with the pilot, the service will be co-ordinated by SLaM and will be provided by staff in SLaM, GSTT and Southwark Council’s Learning Disability Team.

**The evidence base**
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

The pilot has been identified by the National Winterbourne View Joint Improvement Board as being an area of good practice.

Demand for the service has exceeded supply.

Out of area placements cost annual average of £84,750 compared with £67,100 for in borough residential care placements and £41,950 for supported living placements. However, specialist placements for people with behaviour that challenges services can range from £140,000 p.a. for a residential service with 1:1 support and £208,000 p.a. for a residential service providing 2:1 support and £230,000 for an in-patient bed.
Good practice reports highlight that in addition to financial savings, they are accompanied with improved outcomes for the individual in terms of quality of life and wellbeing.

The pilot has been clinically evaluated using:

- HoNOS-LD (clinical wellbeing measure)
- Behaviour Problems Inventory (BPI)
- WHO-QOL (Mini MANS-LD) (Quality of life measure)
- GCPLA (Quality of life measure)
- Professional Quality of Life Scale (Pro QoL)
- Brief Family Distress Scale (FDS)
- Qualitative questionnaire

Feedback from those involved both in developing services for individuals and in the strengthening of local services has been overwhelmingly positive, as have the clinical outcomes and improvements in quality of life for service users and their families.

The pilot has shown the positive impact of the intervention in diverting people with challenging behaviour from more expensive specialist inpatient and residential services and has produced significant savings in placement costs across the health and social care economy totalling £8,563 p.w.; (£445,276 per year).

**Investment requirements £135k (50% funding, from BCF)**

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

The service will contribute to the following metrics:

- The scheme will support people in assessment and treatment services to step down into local community services as quickly as is appropriate.

- Delayed Transfers - Effective joint working of hospital and community-based care in facilitating timely and appropriate transfer from all hospitals for all adults.

- Reduce emergency admissions which can be influenced by effective collaboration across the health and care system.

- Reduce the numbers of people with learning disabilities and / or autism in inpatient beds or specialist residential services.

The scheme will continue to divert people from more expensive, specialist inpatient and residential services and it is anticipated that this action will continue to produce significant savings costs across the health and social.
care economy.

The scheme has already been identified by the National Winterbourne View JIP as good practice and will enhance Southwark’s reputation as an innovative and proactive area.

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

The measures from the pilot will continue to be used in the scheme. These include:

- HoNOS-LD (clinical wellbeing measure)
- Behaviour Problems Inventory (BPI)
- WHO-QOL (Mini MANS-LD) (Quality of life measure)
- GCPLA (Quality of life measure)
- Professional Quality of Life Scale (Pro QoL)
- Brief Family Distress Scale (FDS)
- Qualitative questionnaire

Numbers of service users worked with and outcomes. i.e. supported to remain in the community / diverted from inpatient / specialist care; supported to step down from inpatient services / specialist care.

**What are the key success factors for implementation of this scheme?**

The pilot has shown the following as being key success factors for the service:

- Partnership with:
  - Service users and families
  - Local authority
  - Service providers
  - Commissioners
- Accountability to the multi agency Winterbourne View Steering Group
- Use of positive behaviour support to understand behaviour and develop preventative strategies and crisis planning.
- Systemic approaches
  - Solution focussed
  - Co-creation
  - Building relationships
- Combination of clinical work and strengthening services
- Flexible working and creative solutions.

These were achieved in the pilot and are expected to continue in the permanent team which will involve many of the same staff.
## ANNEX 1.9 – Detailed Scheme Description

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>9</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td>Telecare expansion: supporting people to live at home through assistive technology.</td>
</tr>
</tbody>
</table>

### What is the strategic objective of this scheme?

Telecare expansion underpins the prevention offer in the borough and supports the delivery of the health and well-being strategy in that it can help to reduce the admissions to hospital and residential care and enable vulnerable adults to live independently and safely in the community for longer.

### Overview of the scheme

Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

The telecare expansion intends to provide free telecare including monitored equipment such as pendant alarms as well as more complex equipment for identified cohorts as follows:

- People who are FACs eligible
- People over the age of 85
- People identified as having moderate needs following reablement
- People with a diagnosis of dementia

The target is to reach 1,000 additional service users during 15/16.

### The delivery chain

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The telecare expansion project has a clear governance structure with a project board with ultimate oversight for the delivery. Representatives from adult social care, commissioning, housing and the CCG are members of the board. The responsibility for the operational delivery of the programme sits jointly between housing (where the monitoring and response service sit) and ASC who have the primary role in identifying and assessing need. Performance reports are provided to the senior management team in order that they are able to track delivery against projections.

### The evidence base

Please reference the evidence base which you have drawn on

- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Studies throughout the UK and overseas over the last decade have demonstrated the capacity of telecare to achieve the following outcomes at low cost:

- Enabling people to remain at home who would otherwise need to be placed in residential or nursing care establishments;
- Reducing the number of preventable injuries, accidents or risks encountered by sick, disabled or vulnerable people living at home;
- Supporting unpaid carers to care without experiencing such intense pressure or
stress that they themselves become ill or have to give up their caring role;
• Improving the efficiency of home care services, especially by reducing those costs (e.g. travel costs and time; checking visits, overnight sleepovers) which deliver no direct benefit to the person cared for;

Evidence supporting the development of telecare from Essex county council has indicated that the financial benefits of telecare are for every £1 spent on telecare £3.80 is saved on traditional care. Hillingdon council saw the number of admissions to residential care reduce by half within 18 months of the implementation of their telecare offer.

A number of key groups have been identified as being at particular risk and where the telecare offer can have the most beneficial impact. This has informed the commitment to expand the telecare offer to adult social care clients as follows:
- Adults with critical and substantial needs
- Adults diagnosed with dementia
- Adults aged 85+
- Adults with moderate needs following reablement

**Investment requirements: £566,000** (in addition to £100k within existing NHS transfers
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

1. Reduction in avoidable hospital admissions
2. Reduction in delayed transfers of care
3. Reduction in avoidable nursing/residential care admissions
4. Prevention of avoidable accident and emergency presentations
5. Prevention of readmission to hospital
6. Prevention of falls, and the effect of falls, on the independence of vulnerable people
7. Supporting more older people with dementia and mental health problems in the community
8. Enabling more older people, and people with identifiable vulnerabilities, to continue living in the community
9. Enabling more people with physical and learning disabilities to continue living in the community
10. Supporting more people with long term health related conditions to live in the community
11. Providing a safer working environment for lone workers
12. Reducing pressure on informal carers and the need for respite services
13. Improving carers reported levels of confidence and quality of life
14. Reducing the pressure on statutory and other emergency services

See annex 1.20 on contribution to non-elective admissions target

**Feedback loop**
What is your approach to measuring the outcomes of this scheme, in order to understand
**What is and is not working in terms of integrated care in your area?**

We will be commissioning bespoke research in order to track the effectiveness of the programme. The nature of the outcomes we are intending to achieve through the scheme will require a detailed analysis on a range of metrics including hospital admissions, admissions for falls and referrals to the falls clinic, admissions to care homes, etc. We will also carry out surveys of service users and carers as part of our usual survey process with questions that specifically capture the issue of telecare.

**What are the key success factors for implementation of this scheme?**

- The migration of the monitoring and response service into customer experience
- Increased staffing levels within SMART and ASC to support the delivery
- Funding to support the expansion of SMART to respond to the increased demand
- Embedding of telecare across all teams within ASC and health
- Awareness raising amongst key cohorts
- Clear pathways for all customer groups
**ANNEX 1.10 – Detailed Scheme Description - Carers**

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>10</th>
</tr>

<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td>Carers: investment to support the implementation of the joint carers strategy to help people continue in their caring roles.</td>
</tr>
<tr>
<td><strong>What is the strategic objective of this scheme?</strong></td>
<td>The joint carers strategy recognises that carers are key partners in the delivery of care and support to adults and children in the borough and, not only should they have the skills and resources to take control of their caring role but they should also be able to lead their own lives, following their own aspirations, outside of that role. The investment in the strategy will ensure that these objectives are delivered</td>
</tr>
<tr>
<td><strong>Overview of the scheme</strong></td>
<td>Please provide a brief description of what you are proposing to do including:</td>
</tr>
<tr>
<td>- What is the model of care and support?</td>
<td></td>
</tr>
<tr>
<td>- Which patient cohorts are being targeted?</td>
<td></td>
</tr>
<tr>
<td>The strategy sets outs a series of pledges which form the basis of our delivery model as follows:</td>
<td></td>
</tr>
<tr>
<td><strong>1. Developing an outreach programme</strong></td>
<td>To ensure that carers are reached at an early stage so they know about the services and support available and are able to make choices about what help they receive</td>
</tr>
<tr>
<td><strong>2. Ensuring carers have access to information and advice</strong></td>
<td>To provide carers with the necessary information and advice so that they are fully informed about the caring role and their rights as a carer</td>
</tr>
<tr>
<td><strong>3. Health and wellbeing programme</strong></td>
<td>To support carers to look after their own health and wellbeing</td>
</tr>
<tr>
<td><strong>4. Emergency response services</strong></td>
<td>To ensure that carers are able to access the support that they need in an emergency</td>
</tr>
<tr>
<td><strong>5. Young carers programme</strong></td>
<td>To support young carers so that they can have the same life experiences as their peers</td>
</tr>
<tr>
<td><strong>6. Short breaks provision</strong></td>
<td>To ensure carers are able to take a break from their caring role through the provision of short breaks</td>
</tr>
<tr>
<td><strong>7. Policy development and alignment</strong></td>
<td>To work to align the policies of the council and the NHS to reflect the needs and aspirations of carers</td>
</tr>
<tr>
<td>For the purposes of the strategy, carers are defined as people who support members of their family, friends or neighbours on an informal basis and without financial reward. As an all-age strategy the aim is to ensure that the both young and adult carers receive the support that they need and choose in the ways that they choose and that the detrimental impact of caring is minimised as well is inappropriate caring (in the case of young carers) is prevented.</td>
<td></td>
</tr>
<tr>
<td><strong>The delivery chain</strong></td>
<td>Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved</td>
</tr>
</tbody>
</table>
The council will jointly commission services with the CCG and drive forward the overall programme of changes through the project structure. The project sponsor is the Director of Adult Care.

**The evidence base**

Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

In September 2011 Carers UK was commissioned to undertake a review of carers and support for carers in Southwark. The work has enabled Southwark Council and its health partners to develop a better understanding of the Southwark carer population and carers’ support in Southwark which will lead to:

- Improved strategic planning and commissioning of support for carers
- Identification of opportunities to improve operational, systems level performance within service delivery, particularly carers’ assessments
- Whole system transformation in which the needs of carers are identified and promoted

Some of the highlights within the report include:

- There are approximately 21,000 carers in Southwark
- Around 4 in 10 carers belong to ethnic minority groups
- Between 40% and 50% of carers in Southwark provide more than 20 hours of care per week
- 1 in 4 carers in Southwark provide care for more than 50 hours per week
- Majority of carers in the borough are aged 35-64
- The population of older carers in Southwark is increasing and they are more likely to report poor health than those of working age

The evidence gathered during the Carers UK project has also been complemented by the Personal Social Services Survey of Adult Carers in England - 2012-13, which was completed in November 2012. All carers who had received a carers’ assessment in the previous year were surveyed across a variety of domains covering quality of life and overall satisfaction with services.

The census of 2011 indicated that there are almost 21,000 people in Southwark who care on an unpaid basis for friends and members of their family who are ill, frail or disabled. The contribution that carers make to the borough of Southwark is enormous. In financial terms alone, the care that they provide is estimated to save the health and social care system, in Southwark, £471 million a year.

**Investment requirements £450,000** (in addition to investment from scheme 1 and 13)

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
The outcomes identified that are expected from this programme are that carers:

- Report better physical, mental and emotional health.
- Feel supported in their caring role.
- Are supported to access housing, transport, leisure, information, life-long learning and support that promotes wellbeing.
- Are involved in planning and decision making about the direction of their support and delivery of the services they receive.
- Are supported to live in a safe environment and are assisted to action against any disruption to it, as appropriate.
- Have the opportunity to achieve economic wellbeing and have access to work/and or benefits as appropriate.
- Feel recognised as a carer, understand the implications of their role and how they can receive support when needed
- Feel that they are treated with respect and are listened to, have a sense of self worth and are valued by others including healthcare professionals. Carers are expected to have a role to play in the healthcare, living and care decisions for the person they care for.

The impact of this is that the people they care for will be better supported, leading to improvements in wide range of measures, including ASCOF measures and health measures such as A&E attendance/emergency admissions.

See annex 1.20 on contribution to non-elective admissions targets.

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

A significant proportion of the programme will be delivered through commissioned services which will be specified against the outcomes identified above. Therefore we will ensure that the contract management and monitoring captures these outcomes and the degree to which services are delivering them. In addition we will be overseeing the delivery of the strategy and pledges including the outcomes through the carers strategic partnership. There will also be ongoing and regular performance reports submitted to the senior management team.

The Carers Survey (national bi-annual survey administered locally) will also be a key feedback tool locally for benchmarking performance, as will carer related questions in health care surveys.

**What are the key success factors for implementation of this scheme?**

- Procurement of the carers services that respond to the pledges
- Development of the carers personal budget programme including clear and transparent criteria
- Investment in the carers services and personal budgets
- Review and development of policies that respond to the strategy and the additional responsibilities relating to carers in the Care Act
- Close joint working with CCG
### Scheme ref no.
11

### Scheme name
Enhanced Rapid Response (ERR)

### What is the strategic objective of this scheme?

**Overall the service will:**

- Promote independence and, where possible, enable older people and adults to continue to live in their own homes
- Prevent unnecessary admissions to acute care
- Facilitate discharge for patients
- Provide a specialist intermediate care assessment of the adult/older person (and their carer) in an appropriate environment, ideally in their own home.

### Overview of the scheme
Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

ERR provides home based rehabilitation and support targeted at adults and older people with a physical or sensory disability, with the aim of them regaining or maintaining independent living within the community and preventing unnecessary hospital admission.

The service is able to respond rapidly (within two hours if needed) to carry out a holistic assessment of needs and put support in place to prevent unnecessary hospital admission. Referrals are accepted from a range of areas including GPs, Community Matrons, District Nurses, community therapists, London Ambulance Service, A&E and other acute wards and acute assessment units where the patient’s length of stay is under 48-72 hours.

The service provides short term outcome focused interventions in patient’s homes, through multidisciplinary assessment and interventions co-ordinated by a nurse, physiotherapist or occupational therapist, and delivered by Rehabilitation Support Workers (RSW’s).

The service can implement care, support, therapy or assistive equipment to:

- Increase independence/safety with activities of daily living (ADL) such as washing, dressing and meal preparation
- Improving independence and safety with transfers, mobility and stairs
- Assess and take action to reduce the risk of falls including provision of home exercise plans
- Improve community access such as shopping and attending GP clinics
- Basic nursing interventions such as medication management, monitoring skin integrity, simple dressings, self-management/education, continence assessment and support
• Assess for and prescribe adaptive equipment to improve safety with mobility and activities of daily living such as walking aids, bedside commodes, and chair raisers.

Patients may require and receive support from a single clinician or two or more clinicians working together, depending on their needs.

A specialist medical consultant is aligned to the service to provide medical support and advice; however the medical responsibility for the patient remains with their GP.

The maximum anticipated episode of care is usually six weeks, with many patients needing only one to two weeks to achieve their goals.

**The delivery chain**

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

Lambeth and Southwark CCG both commission GSTT to provide the ERR service.

The Clinical Lead, who is also the operational manager, has line management responsibility of the Therapy Leads. The operational manager is a dedicated leadership and development role that reports into the Head of Rehabilitation and Therapy.

There are close working relationships with social care, GPs, acute medical colleagues, @home, Reablement and the Supported Discharge Team.

**The evidence base**

Please reference the evidence base which you have drawn on

- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Model based on best practice including:

Department of Health Policy documents:

• Transforming Community Services
• High Quality Care for All
• Care Quality Commission (CQC) Regulations
• National Service Frameworks (NSFs, including for Older People, Long Term Conditions)
• Our Health, Our Care, Our Say
• Intermediate Care – Halfway Home
• End of Life Care Strategy

Regulatory Documents:

• CQC regulations
• Health and Care Professions Council (HCPC) Regulations/Standards
• Nursing & Midwifery Council Regulations/Standards
• Professional Standards (College of Occupational Therapy, Chartered Society of Physiotherapy, Nursing and Midwifery Council)
• All nationally unregulated staff within the team work to organisational and local policies, procedures and competency frameworks
**National Guidance:**
- National Institute of Clinical Excellence e.g. Falls, Osteoarthritis, Parkinson’s Disease.

**Local drivers:**
- Joint Health & Social Care Strategy for Older People
- Urgent and unscheduled care network
- GSTT Adult Community Business Plan
- Southwark and Lambeth Integrated Care (SLIC)
- GSTT Local Services Programme
- Winter planning and pressure surge management.

**Investment requirements £2.2m 15/16  (£0.214m in 14/15 for social work support element only)**
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

The scheme makes a key contribution to minimising emergency admissions, delayed transfers, reablement effectiveness, user experience and care home admissions. The scheme is already established.

See annex 1.20 on contribution to non-elective admissions target

**Feedback loop**
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Existing comprehensive reporting mechanism are in place as part of the SLIC programme management structure and this will be incorporated into the BCF monitoring process.

**What are the key success factors for implementation of this scheme?**

Scheme is already implemented. For continued successful development referral volumes and capacity need to be aligned through effective planning.
<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td>@home: Hospital at home services: existing service including full year effect of extension of home ward, investing in an acute clinic team to care for patients at home and avoid unplanned admissions</td>
</tr>
</tbody>
</table>

**What is the strategic objective of this scheme?**

The @home service is an important part of the admission avoidance strategy in the Boroughs of Lambeth and Southwark/. Avoiding an admission or the early discharge from a hospital admission contributes to releasing capacity in acute beds to support elective and necessary admissions

**@home Strategic objectives**

a) To develop an innovative service that provides integrated, acute, complex and intensive clinical care at home, with optimum safeguarding for people who access this service.

b) To provide an equitable and responsive service on a scale that meets local need, maximises service outcomes and improves the patient experience.

c) To improve clinical outcomes and patient satisfaction.

d) To develop a service that gives confidence to GPs, hospital consultants and other acute partners in referring, and confidence to staff, patients and carers for timely discharge and admission avoidance decisions.

e) To create a major building block, in the redesign of community nursing and other community services. To increase community nursing’s confidence in offering acute care and to up-skill clinical staff in the community.

f) To relieve pressure on acute services, reduce patient length of stay, and facilitate better use of inpatient beds for elective and other patients.

**Overview of the scheme**

Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

The @home service provides acute clinical care at home that would otherwise be carried out in hospital. Interventions are delivered in the usual place of residence in order to provide the best possible patient experience and outcome, and enable the patient to benefit from holistic integrated care.

The concept of providing healthcare @home means that instead of patients being admitted to hospital, a multi-disciplinary team works collaboratively with GPs, hospital staff and other organisations to deliver safe, quality healthcare within the
patient’s own home. This care also supports advanced discharge from hospital so that people can complete their episode of treatment at home. The @home team includes Nurses, Practice Development Nurses, Therapists, Pharmacists and Social Workers, who are all involved in visiting patients in their own home and administering the care required.

The service has three main aims:
- Identifying people at risk of a hospital admission through risk stratification and providing care which prevents their condition getting worse.
- Allowing people to be given a high level of care in their own homes instead of being admitted unnecessarily to hospital.
- Allowing for advanced discharge out of hospital, so patients can recuperate in the comfort of their home while receiving high quality care.

Referrals can be made between 08:00 – 23:00hrs (by 19:00hrs for same day admission) 7 days per week.

**How does the @home service work?**
Once a referral has been made, a member of the @home team will visit the patient at home for an initial assessment and explain the care that will be given. An @home clinician will be appointed and they are responsible for making sure the right care is given by the right professional in the team at the right time. Patients will be discharged from the @home team once their course of care is complete.

**Referral Criteria:**
- Patients aged 18 or above with acute episodes of medical illness who would otherwise require hospitalisation for stabilisation and management. Who require the following interventions:
  - Intensive support and monitoring by highly train clinicians for an acute episode of illness
  - IV Therapy including PICC & Hickman Lines
  - Complex Wound Management including VAC Dressing
  - Blood Monitoring and Anticoagulation Therapy in an acute episode of illness
  - Clinical support and monitoring for an acute exacerbation of Chronic condition such as LVF, COPD
  - Clinical support and monitoring to facilitate early discharge i.e post operatively, A&E, MAU in order to reduce hospital stay

**Who Can Refer:**
- GPs, SELDO, London Ambulance Service, Hospital Consultants and Other Health Professional.

**The delivery chain**
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

Lambeth and Southwark CCG both commission GSTT to provide the @home service.
See attached @home professional leadership structure.

A Deputy Head of Nursing/Clinical Lead has operational line management of four @home Matrons who lead the multidisciplinary teams, and two Clinical Nurse Practitioners liaising with acute colleagues and case finding within the hospitals. This operational manager is a dedicated leadership and development role reporting to the Head of Community Nursing and Nursing Practice.

There are close working relationships with acute medical colleagues, Enhanced Rapid Response and Supported Discharge Team, GPs and social care.

The evidence base
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Similar services have already been introduced successfully in several parts of the UK, which informed the design of the pilot.

Pilot
A pilot ‘Home Ward’ service was initiated in January 2012 by a joint commissioner, provider and social care programme board (the Admission Avoidance Programme Board).

The pilot led to a compelling strategic, clinical and financial case for the full implementation of an @home service across Lambeth and Southwark. Wide stakeholder consultation and service observation took place in preparing the business case, achieving significant engagement across GSTT, KHP (Kings Health Partnership) and primary care, to support the expansion of the scheme. Those who had referred patients to Home Ward - GPs, hospital Consultants, District Nurses etc - expressed appreciation of the service and were keen that it should continue and expand. They were eager for it to be available across both boroughs.

The business case built on a number of previous analyses and evaluations of Home Ward (HW) and related developments, notably:

- an external evaluation of the Home Ward pilot by Virginia Morley Associates in September 2012 including user feedback;
- the original business case for the Home Ward Pilot as part of the transformation of community services;
- the new older people’s pathway developed by Southwark and Lambeth Integrated Care (SLIC);
- scoping work on the future of Home Ward in November 2012;
- work on the Intermediate Care Pathway;
- the operational policy and medical model options papers;
- patient and referrer feedback

The business case also incorporated a review of other NHS and commercial models of acute home-based provision including Medihome, Hospital at Home Ltd, Orla, other NHS models and contact with virtual ward related services in three other trusts in addition to Virtual Wards visited in the original Pilot start-up and awareness of
PACE (Post Acute Care Enablement Service) provided by Bromley Health Care (a social enterprise).

Early evaluation conclusions by Virginia Morley Associates included

- Patient feedback about the service was overwhelmingly positive.
- The scheme experienced a number of initial teething problems, but most had been overcome by the five month mark.
- A preliminary internal analysis of costs at month five suggested that the Home Ward scheme was no less costly than acute care, but this reflected that the scheme had not been working at full capacity (the pilot had suffered from a lack of GP endorsement and a small catchment area), which pushed up bed costs and length of stay.

The evaluators summarised feedback and operational problems that were highlighted during the qualitative interviews with clinicians and others involved in the programme. This provided the community services management team with an opportunity to resolve outstanding problems where possible. In light of the above, it is evident that the admission avoidance programme should be viewed as a longer term strategic piece of work that is developed and implemented over a 3 to 5 year period of time, aligned with the integrated care programme. This is expected to give the service a chance to learn from the set up, improve any operational difficulties, provide an opportunity to adjust and change referral patterns if required and for more robust quantitative and qualitative evaluation to be completed as part of larger externally commissioned evaluation of integrated care. Lambeth and Southwark commissioners believe that the schemes that have been funded can make inroads into acute pressures but that they need to be given time to achieve this.

**Patient choice**

In addition to the high cost associated with hospital admission, prolonged length of stay - especially in the frail elderly and those with long term conditions - can lead to a higher risk of acquired infection and other complications, loss of confidence, function and social networks. Increasingly, given the choice, patients and their carers show a preference for receiving care at home, when they have confidence that it will be provided by skilled practitioners offering continuity of care and working collaboratively.

**Investment requirements : £1.2m**

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

- Admission avoidance and early discharge, reduced bed days, user experience

Although scheme is established it is expected that throughput should increase as the approach matures.

See annex 1.20 on contribution to non-elective admissions target
Feedback loop
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Integrated metrics are reported monthly which track referrals/impact on length of stay and admission avoidance across primary, community and acute.

Evaluation commissioned that will include:
- Patient satisfaction
- Impact on family/informal carers
- Impact on other community and social services
- Bed occupancy on the @Home wards
- Length of stay
- Number of unplanned admissions to hospital
- Incidences of cognate clinical complications (health care related infection, pressure sores, other condition specific complications)
- Staff satisfaction in terms of readiness for working on the @Home wards and rotational opportunities and sharing of skills between nurses and therapists.
- Effectiveness of the generic support worker roles

What are the key success factors for implementation of this scheme?

Based on the evaluation of the ‘Home Ward’ Pilot, experience of services elsewhere and stakeholder consultation, the conditions for successful expansion of the service were identified and incorporated into the service design and implementation of @home during 2013/14, including:

1) Strong dedicated developmental and operational leadership, with effective business support.
2) HW serving all GP practices in Lambeth and Southwark, who have regular contact with representatives of the service.
3) An integrated IT and telecommunications system that is fit for purpose in a mobile, rapid, geographically distributed service, including teleconferencing capability for MDTs, and a business continuity plan to overcome any interruption to critical IT information.
4) A scalable model of service delivery providing for a minimum 80 o 100 beds, sustaining occupancy levels that demonstrate cost effectiveness and relief of pressure on in-patient beds.
5) Clear patient pathways for referral and expectations for length of stay in Home Ward, with timescales for discharge regularly monitored.
6) A single point of access, with a streamlined and integrated referral process for Home Ward and ERR, i.e. a single phone number and a single route for e-referral, including ‘out of hours’ cover.
7) Excellent clinical nursing care combining best practice of acute and community nursing, with confidence to treat more patients traditionally cared for in acute settings.
8) Integrated multi-disciplinary and inter-disciplinary working, with clarity about medical responsibility.
9) A consistent service presence in local acute hospitals (Guy's and St Thomas' and King's College Hospital) at the right level and background, working with hospital teams, MDTs etc. This will be crucial to the visibility and effective take-up of Home Ward as an alternative to in-patient care.

10) Clear protocols for case managed patients, with Community Matrons included in Home Ward multi-disciplinary team meetings.

11) A ‘ready use’ equipment store, with a small number of key items e.g. portable bladder scanner, home ADL and mobility equipment, IV stands, for short term loan when existing equipment arrangements cannot meet service needs.

12) A new career pathway for community nursing, supported by tailored class-leading HW training, to develop senior community practitioners with advanced clinical reasoning, practice and decision-making skills.
### ANNEX 1.13 – Detailed Scheme Description - Care Act implementation

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
</tr>
</thead>
<tbody>
<tr>
<td>13</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Scheme name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Care Act Implementation: amount of BCF identified by government as contributing to implementation of the Care Act</td>
</tr>
</tbody>
</table>

### What is the strategic objective of this scheme?

To ensure that the Care Act is successfully implemented in Southwark by:

- providing funding for Care Act implementation costs from the Better Care Fund in line with national guidance
- maximising benefits from the considerable opportunities the Act presents for the whole health and care system and addressing the significant challenges successful implementation presents.
- ensuring an integrated approach to the implementation of the Care Act that is co-ordinated with BCF schemes and the wider integration programme
- focusing on the requirements for health, social care and housing and other agencies to work together in an integrated way to promote health and wellbeing and prevent and delay the onset of intensive care and support needs.

The key strategic opportunities presented by the Act include:

- Improving rights for carers, and giving them the right to have an assessment of support needs, and be offered local authority support for their eligible needs
- A focus on the promotion of wellbeing (both adults and carers) when providing support
- Increased focus on personalised services to meet people’s overall needs
- Greater clarity on safeguarding responsibilities and how the local authority and partners across sectors work to protect our most vulnerable residents
- Engagement with those currently paying for the cost of care and support, who will benefit from financial support from 2016, including assessments of needs
- Giving our residents better information and advice
- Duties that reinforce work on integrating adult social care services with health, housing and children’s services in order to maintain wellbeing and prevent and delay care and support needs.

### Overview of the scheme

Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

The £1m funding will contribute to the costs of the implementation of the Care Act incurred by the Local Authority that are expected to be funded from the BCF in line with national requirements.

The Care Act implementation programme involves a complex range of changes to the adult care system. A Southwark Council Cabinet report on the Care Act indicating the range of changes involved in the programme can be viewed through this link:

The exact model of adult care involved varies between services but is characterised by a personalised and integrated approach to care which puts people in control of the support they receive to achieve the goals they want to reach, with an emphasis on prevention and short term support to maximise people’s ability to live independently at home before considering long term care options.

The cohort who will benefit from the changes includes all people eligible for social care and their carers, and people in contact with social care but below the eligibility threshold who may benefit from preventative services to promote their wellbeing.

The precise breakdown of implementation costs will be establish during the implementation period from 1st April 2015, and will also depend on actual demand for support, such as enhanced access to carers services.

Based on national estimates an indicative allocation of the costs to be funded from the BCF would be £1.131m as follows:

<table>
<thead>
<tr>
<th>Care Act implementation costs area allocated to BCF</th>
<th>£</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carers – new assessment duties</td>

The Southwark BCF specific allocation for the Care Act is £1m, however the additional scheme on Carers (scheme 10) will also contribute to the implementation costs to bring the total funding into line with the indicative allocation.

The delivery chain
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The Adult Social Care division will lead on the delivery of the Care Act requirements, including the provision of assessment and care management services provided through the directly managed social care workforce, and through externally commissioned services such as carer support from the voluntary sector.

While key elements of the Care Act are the responsibility of local authorities there is recognition in the Act of the responsibility that health services in particular (and also areas like employment services such as JobCentre plus) play in relation to successful delivery of the key outcomes and the requirements of the Act (particularly linked to areas such as information and advice, preventing, reducing and delaying care and support needs, specific responsibilities around Continuing Health Care, reducing delayed hospital
The scheme relates to local implementation of national policy on the transformation of adult care and support as set out in the Act and related detailed guidance, which have all been developed using a robust evidence based approach. Local implementation will be in line with guidance.

**Investment requirements:** £1m
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

As the implementation of the Care Act relates to a whole system transformation it is expected to contribute to the full range of outcome measures set out in the Adult Social Care Outcomes Framework (ASCOF) as well as broader Public Health and NHS outcome measures.

**Feedback loop**
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

The CCG BCF programme lead will sit on the Care Act implementation group to help ensure a high level of integration with the BCF programme requirements. The Care Act programme management arrangements will include regular exception reports indicating progress, and these reports will be used within the proposed BCF governance arrangements, including confirmation of costs incurred.

**What are the key success factors for implementation of this scheme?**

As set out in the detailed Care Act programme management arrangements, key success factors include:

- sufficiency of funding to meet actual costs generated by new arrangements e.g. demand for carers services, new national eligibility criteria, numbers of self funders seeking an assessment and newly eligible for council support
- rigorous programme management
- effective joint working between agencies involved
- workforce training and development
- market development to support personalised approach to services
- implementation of new assessment systems
- implementing IT/IS systems
- effective communications, including information and advice on the changes for the public and professionals
# ANNEX 1.14 – Detailed Scheme Description – Social Services Capital

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>14</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td><strong>Social Services Capital</strong>: existing grant rolled into BCF 15/16 funding. Includes investment in centre of excellence for dementia</td>
</tr>
</tbody>
</table>

### What is the strategic objective of this scheme?

The social services capital programme includes a range of projects aimed at improving accommodation and buildings for people with social care needs, enabling them to live independently in their own homes in the community.

As a result of national funding changes the grant will be paid into the BCF. This creates the strategic opportunity to take a more integrated approach to capital investment between partners on estates and other capital investments.

### Overview of the scheme

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

The current capital programme includes major investments in a new centre of excellence for people with dementia, providing facilities for day support, respite, extra care. It will be a hub for multidisciplinary work in line with the dementia strategy.

It also includes a significant capital programme to enhance supported accommodation and respite facilities for people with learning disabilities.

### The delivery chain

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

- The local authority commission the capital works.

### The evidence base

Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Individual capital schemes require a business case

### Investment requirements: £875,000

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

### Impact of scheme

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan

Please provide any further information about anticipated outcomes that is not captured in headline metrics below

Individual capital schemes business cases set out expected impact.
### Feedback loop
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

As the capital programme funded from this source becomes part of the BCF it will be covered within the Section 75 agreement and joint governance arrangements which will include monitoring of the programme.

### What are the key success factors for implementation of this scheme?

Each capital project has associated success factors identified, with procurement delay risks being a key area.
### ANNEX 1.15 – Detailed Scheme Description – Disabled Facilities Grant

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>15</th>
</tr>
</thead>
</table>

**Scheme name**

**Disabled Facilities Grant:** existing grant enabling disabled people to live at home being channelled into the BCF (non-council accommodation).

**What is the strategic objective of this scheme?**

Prevention of care home admission and hospital admissions / delayed discharges for disabled people by funding major adaptations to people’s homes. Promotion of overall health and well-being and quality of life of disabled people.

**Overview of the scheme**

Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

Direct support in terms of home improvements, falls prevention interventions, minor and major adaptations.

80 major adaptations due to be completed in 2014/15.

**The delivery chain**

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The Council commissions the service and employs staff to administer the scheme.

Referrals made from Occupational Therapists (OTs), then the Financial counsellor (FC) visits the client within 2 weeks to carry out assessment, they have 1 week to pass case on to surveyor.

The surveyor must visit within 2 weeks of receiving the referral from FC, surveyor has 3 weeks to complete schedule of works, then 4 weeks to go out to tender, on receipt of tenders and awarding job, surveyor has 2-3 weeks to prepare cost report. On average jobs from initial referral to completion take 1 year.

Some works such as stairlifts and automated door opening systems can be completed in much faster timescales where costs are under £5k don’t need to go out to tender. However, if scope of works includes other repair work then DFG process can take a lot longer to complete depending on the nature of additional enabling works required.

**The evidence base**

Please reference the evidence base which you have drawn on

- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Housing Grants, Construction and Regeneration Act 1996 sets out provisions for the mandatory DFG.

<tbody>
<tr>
<td>Scheme name</td>
<td>Protecting Adult Social Care of benefit to health services: further support in line with BCF conditions to maintain key service levels in context of LA funding cuts: assessment, care management and maintaining eligibility levels</td>
</tr>
</tbody>
</table>

**What is the strategic objective of this scheme?**

To protect social care services that are of benefit to health in the context of year on year budget reductions faced by adult social care.

**Overview of the scheme**

Please provide a brief description of what you are proposing to do including:

- **What is the model of care and support?**
- **Which patient cohorts are being targeted?**

£0.5m has been set aside in the 2015/16 BCF to protect adult care services that would be cut in the 2015/16 budget round (for which up to 10% cuts are anticipated). This will be aimed at supporting social services that are essential for supporting integrated working with health, but for which access may need to be reduced, possibly via a tightening of eligibility criteria. The precise allocation of this sum will not be determined until the 2015/16 budget settlement for Southwark’s Adult Care, and key budget reductions are known. However it will be likely to be used to help support services that prevent hospital admission. The sum will be used directly to help the department meet its budget target without cutting key services.

Note: The sum is in addition to £1.5m of previous NHS sec 256 funding already used to contribute to the social care budget target to protect services.

**The delivery chain**

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

Adult Social Care will use the resources to maintain funding for existing services.

**The evidence base**

Please reference the evidence base which you have drawn on

- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

NHS funding to support social care of benefit to health is an established practice nationally and locally, and a requirement of the BCF.

**Investment requirements: £0.5m 2015/16**

Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

**Impact of scheme**

Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

<table>
<thead>
<tr>
<th>By protecting social care and enabling eligibility criteria to be maintained a range of health and social care outcome measures will be supported. Hospital admissions, delayed transfers and the full range of ASCOF measures may be impacted, depending on the precise allocation to particular schemes.</th>
</tr>
</thead>
<tbody>
<tr>
<td>See annex 1.20 on contribution to non-elective admissions target.</td>
</tr>
</tbody>
</table>

**Feedback loop**

What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

The impact of protecting social care will be monitored as part of overall BCF monitoring.

**What are the key success factors for implementation of this scheme?**

It is important that during budget discussions this resource is targeted at the most effective social care services that are otherwise under threat, and that the resources are transparently allocated to social care for the agreed purposes.
ANNEX 1.17 – Detailed Scheme Description - 7 day working

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>17</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td>Seven day working: programme to fund seven day working across primary, community and social care to support seven day discharge</td>
</tr>
</tbody>
</table>

What is the strategic objective of this scheme?

To support patients to be discharged at weekends, and prevent unnecessary admissions at weekends, by providing effective co-ordinated 7 day discharge support from social services and primary care.

Overview of the scheme

Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

1) Additional ERR capacity (£400k)

Local services have reported increases in the number of complex patients requiring double-handed support three to four times a day in addition to social care support. Winter monies have been allocated to seed fund additional capacity in advance of the BCF in 2015/16. This will be used to manage a combination of both double handed and single handed patients and also fund the associated social care support required to ensure the rapid transfer of patients to re-ablement or standard packages of care.

2) Extended Primary Care Access (£743k)

Southwark CCG has agreed to commission extended primary care access to be delivered through 2 to 4 access points, 8am - 8pm, 7 days a week. This represents approximately 106000 additional appointments per annum. Patients will access the service through their general practice or the Out of Hours service, and those requiring same day or next day care will receive rapid clinical assessment through telephone management. If it is deemed that they need to be seen they will be either booked into their own practice or booked an appointment in the ‘Access clinic’ which will be staffed by GPs and nurses and have access to consultation diagnostics. This will act as an extension of general practice, with clinicians having access to patient records to support continuity of care, and will be fully integrated with GP out of hours provision. The first site will be live in November 2014 followed by a second in January 2015. The CCG have also been successful in securing nearly £1 million from the Prime Ministers Challenge Fund which will be used to support the implementation of this service. This work forms part of the broader CCG Primary Care & Community Strategy aiming to improve access, outcomes, integrate services and provide more care out of hospital.
The service does not seek to target any specific patient cohorts, but care will be taken to support equity of access for high risk groups.

3) **Integrated weekend working (£350k)**

Whilst a number of hospital and community services operate seven days a week to support discharge of patients, the lack of social care input at weekends has been a limitation. Lambeth & Southwark winter monies have been allocated to seed fund this scheme in 14/15. It will include social work input and appropriate support services to facilitate increased discharges at weekends. This proposal will facilitate a multi disciplinary team approach and support. The scheme will fund 4 social workers per borough to be placed across both GSTT and KCH, with 2 to be based in A&E and the assessment unit and four on the elderly care wards. Social workers will:

- meet patients in order to complete assessment/support plan sign off
- meet with relatives/support networks
- follow up outstanding referrals to relevant departments
- liaise with Discharge Co-ordinators(Ward Staff) and engage in completion of check lists/HNA
- prepare paperwork and complete case management tasks to facilitate discharge
- work closely with other Health and social care teams to ensure good practice and effective use of limited weekend resources
- follow up discharges made on Fridays
- work with ERR and A&E/Admission wards to offer assessment.

### The delivery chain

Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

1) Enhanced ERR 7 day capacity

Commissioned by CCG and provided by GSTT Community services working with social care across both local authorities in relation to onward support

2) Extended Primary Care Access

Commissioned by CCG and provided by two primary care umbrella organisations: Improving Health Ltd and Quay Health Solutions

3) Integrated working at weekends

Commissioned by CCG and provided by social care across both local authorities

### The evidence base

Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

1) Acute seven day working

- London wide standards for urgent & emergency care
2) ERR – see scheme 11

3) Extended Primary Care Access
   - The RCGP has suggested that the contact rate for Scottish practices provided the closest available benchmark for total capacity (GP and nursing). This is approximately 83 face to face contacts per 1,000 patients per week, (62 of these being GP contacts) for an average standardised practice. The additional capacity requirements have been calculated using this and current service activity (core contract, extended hours DES, total SELDOC, Lister Walk-in centre).
   - The service principles have been developed through a programme of engagement with both patients and practices and informed by the review of urgent care services within Southwark.
   - We are participating in both the national Prime Ministers Challenge Fund evaluation and commissioning a local evaluation to more fully understand the impact.

4) Integrated working at weekends
   - Clinical standards for seven day working
   - Small scale pilots have been undertaken at both King’s and GSTT to understand the potential impact of this type of intervention and this scheme will build upon this including the evaluation measures.

<table>
<thead>
<tr>
<th>Investment requirements</th>
<th>£1.5m</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Impact of scheme</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan</td>
</tr>
<tr>
<td>Please provide any further information about anticipated outcomes that is not captured in headline metrics below</td>
</tr>
</tbody>
</table>

1) Additional ERR
   - Reduced length of stay
     - Double handed patients: it is estimated that this could lead to a length of stay reduction of between 7 and 21 days, allowing patients to integrate back into their home environment far earlier.

2) Extended Primary Care Access
   - Increased capacity within primary care - demand and capacity measures to be confirmed
   - Increased patient satisfaction in relation to access, consistency of message and treatment
   - Greater staff satisfaction
   - Support a reduction in A&E activity

3) Integrated weekend working
   - Preventing admission of patients in A&E (or Assessment Unit) thereby reducing emergency admissions
   - Increase the number of earlier/weekend discharges thereby reducing length of stay
Feedback loop
What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area?

Alongside high level measures such as delayed transfers and emergency admissions, more detailed analysis will be undertaken of the adequacy of the extent of 7 day working. Specific cases where discharge is delayed at the weekend due to lack of social care or primary care support will be examined in detail.

What are the key success factors for implementation of this scheme?

1) ERR
   - Appropriate support services in place for double handed patients
   - Onward support

2) Extended Primary Care Access
   - Promoting positive health seeking behaviours and patient education
   - Cultural change within general practice – working in a new and collaborative way
   - Workforce
   - Robust systems/infrastructure to support i.e. telephony

3) Integrated working at weekends
   - cultural change amongst clinical and social care staff: working in an new way, referring and discharging patients
   - effective support services in place to discharge patients
   - workforce/recruitment
   - patient choice and support
   - systems/infrastructure to support i.e. access to appropriate patient information etc
<table>

<tbody>
<tr>
<td><strong>Scheme name</strong></td>
<td>Voluntary sector preventative services: existing grant funded services which will be used to take an integrated approach to prevention and protect CCG and ASC funded services</td>
</tr>
</tbody>
</table>

**What is the strategic objective of this scheme?**

The vision for adult social care sets out the framework for delivering objectives within the council plan. It identifies the need to develop a sustainable system that puts people in control of their own care and support, make sure that the most vulnerable people are supported and also deliver value for money for local residents. With this in mind, the vision sets out to re-shape the universal offer (open access discretionary services) that cover areas such as befriending, information and advice. The community support model represents a key element of the service redesign aimed at achieving the vision.

**Overview of the scheme**

Please provide a brief description of what you are proposing to do including:
- What is the model of care and support?
- Which patient cohorts are being targeted?

Between August and October 2011 consultation with stakeholders was undertaken to develop a service model that would deliver the required structural and financial changes by creating efficiencies whilst protecting, as much as possible, the front-line services.

The agreed model identified three specific service elements:
- Information, advice and access
- Well-being planning
- Social interaction development and befriending

**Information, Advice and Access** services are aimed at enabling vulnerable adults to find the help and support they need to maintain their independence and improve their engagement in the local community. The providers link closely with the council’s information and advice portal and respond to the needs of customers either contacting them directly or referred by the council. They provide a broad range of information about access to services, welfare rights, debt advice, and access to training and employment opportunities.

**Well Being Planning** services offer support to customers to take more responsibility for their own health through making lifestyle changes and through a better understanding of health issues. To achieve this they are supported to develop a well-being plan that sets out a clear set of objectives and how to achieve them.

**Befriending – social interaction development** services have shifted the focus from one of constant unchanging volunteers visiting people in their own homes, to a model of creating social networks for people and connecting people so that they can move on from...
services and achieve greater independence

The delivery chain
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

Project sponsor - Director of Adult Social Care

Delivery team – Broad range of voluntary and community sector partners as follows: Age Concern, Alzheimer's Disease Society, Blackfriars Settlement, Dulwich Helpline & Southwark Churches Care, Lambeth Family Link, Lambeth Mencap, Leonard Cheshire Disability, Riverside ECHG, Southwark Disablement Association, Southwark Pensioners Time and Talents

Under the BCF these services will be jointly commissioned.

The evidence base
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Making a strategic shift towards prevention and early intervention of one of the central objectives of Putting People First. In Southwark we appreciate that the current model of support and provision is more often than not based on a reactive approach where people are ‘done to’ or where things are ‘done for’ a person in need. By understanding this and working to shift to a model of enabling people to be able to ‘do for themselves’, before a time of crisis or significant deterioration in ability, Southwark is aiming to support and maintain our citizens ability to engage positivity in their own communities, manage their own health and social care needs and have a far greater emphasis on self directed support over traditional models of care as they encounter and engage with services and professionals.

Developments in medicine and public health have meant that the population as a whole is living longer as people age or live longer with complex health conditions. Demographics in Southwark, particularly those relating to an aging population, socially excluded and deprived communities and people with complex needs, indicate that significantly more people will be accessing health and social care services over the coming years. This increase in service demand is occurring alongside reducing public resources as public sector spending comes under increasing pressure. We know that public sector finances will not increase in line with this demand and as such continuing with current models of service is unsustainable. The Community Support Model is one strand of the prevention approach highlighted above.

Investment requirements
Please enter the amount of funding required for this scheme in Part 2, Tab 3. HWB Expenditure Plan

Impact of scheme
Please enter details of outcomes anticipated in Part 2, Tab 4. HWB Benefits Plan
Please provide any further information about anticipated outcomes that is not captured in headline metrics below

The aim of the model is to support the following outcomes:

- Older and disabled people understand what choices they have and are able to
make informed decisions about how to support themselves;

- Older and disabled people are able to access services and activities that they choose;
- Older and disabled people take an active approach to supporting themselves within their means by planning their lives;
- The health and well-being of older and disabled people is supported by the choices they make;
- Older and disabled people are able to develop social networks that support their independence

<table>
<thead>
<tr>
<th>Scheme ref no.</th>
<th>19</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheme name</td>
<td>End of life care: development of an End of life Care Co-ordinator(s) based in social care but working across NHS and Social Care in Southwark to integrate, build on and improve the overall approach.</td>
</tr>
</tbody>
</table>

What is the strategic objective of this scheme?

Improved co-ordination of care for people at the end of their life to improve the quality and outcomes of services.

Overview of the scheme

Please provide a brief description of what you are proposing to do including:

- What is the model of care and support?
- Which patient cohorts are being targeted?

Co-ordinators to be recruited to develop and improve the approach to end of life care strengthening the links between social care and health, ensuring multi-agency resources are well co-ordinated to support people to remain in their own home in a safe and dignified way in line with their personal plan, and informal carers are well supported. The Co-ordinators will support the link with community nursing and specialist palliative care teams to ensure that people’s experience of care and support provision is seamless and to ensure advance care plans are developed to prevent avoidable crisis. The scheme will aim to prevent emergency admissions and unnecessary stays in hospital. The budget includes funding for training staff involved in end of life care.

The co-ordinators will have a particular focus on the cohort of clients with a terminal diagnosis who are not yet in need of palliative care services to ensure that this client group have access to appropriate services to support advance care planning.

The Co-ordinators will also have a specific remit in working with the Nurse Consultant for End of Life Care and community nursing to explore how residential care can be supported to manage end of life care.

Co-ordinators will work with health and social care professionals to explore and gather best practice evidence from around the country to further develop service provision, improve pathways and fast tracks in Southwark, linking with other work streams for example, Dementia care.

With partners the Co-ordinators will further develop discharge pathways from acute hospital to a “preferred place”, and thus allow more people die in a setting of their choice. The scheme will look to expand and develop out of hours/rapid response provision in terms of medical support, medication management, strengthening community pharmacy presence.

The scheme seeks to strengthen the medicine management support to care
homes to support admission avoidance. This will be achieved by increasing the pharmacy input into care homes to ensure that prescribing reviews are in place for people identified as end of life to reduce poly pharmacy and ensure that anticipatory drugs are available both in and out of hours. (This includes £30k which will be of benefit to a wider cohort).

A network of 4 co-ordinators will be developed, covering each neighbourhood.

The delivery chain
Please provide evidence of a coherent delivery chain, naming the commissioners and providers involved

The End of Life Care Co-ordinators will be recruited jointly and would work as part of an MDT and link in with key professionals including End of Life Nurse Consultant, GSTT Palliative Care End of Life Co-ordinator, St Christopher's, Marie Curie, SELDOC (Out of Hours Service) and social care partners. They would help develop ideas for smarter End of Life Care pathways and have a greater role around End of Life Care linked to residential and nursing care.

The evidence base
Please reference the evidence base which you have drawn on
- to support the selection and design of this scheme
- to drive assumptions about impact and outcomes

Around 20% of people in Southwark currently die in their own home and evidence from other areas is that more can be done through co-ordinated support to increase that in line with people's wishes. This may be at home or another place of their choice.

Feedback from carers frequently indicates the quality of end of life care should be improved through better co-ordination.

The extract below from “Quality standard for end of life care for adults” encapsulates Southwark's vision for End of Life Care provision. The End of Life BCF Scheme has been developed to support services in Southwark to meet the general quality measures that we should be judging End of Life care social care provision.

“This quality standard describes high-quality care that, when delivered collectively, should contribute to improving the effectiveness, safety and experience of care for adults approaching the end of life and the experience of their families and carers. This will be done in the following ways, regardless of condition or setting:

- Enhancing quality of life for people with long-term conditions.
- Ensuring that people have a positive experience of (health) care.
- Treating and caring for people in a safe environment and protecting them from avoidable (healthcare-related) harm.

The quality standard is also expected to contribute to the following overarching outcome(s) for people approaching the end of life:
- The care that people approaching the end of life receive is aligned to their needs and preferences.
- Increased length of time spent in preferred place of care during the last year of life.
- Reduction in unscheduled care hospital admissions leading to death in hospital (where death in hospital is against their stated preference).
- Reduction in deaths in inappropriate places such as on a trolley in hospital or in transit in an ambulance."

| **Feedback loop** |
| What is your approach to measuring the outcomes of this scheme, in order to understand what is and is not working in terms of integrated care in your area? |

- There will be an evaluation of the end of life care cases co-ordinated to determine the effectiveness of the approach, including use of carer feedback, unplanned admissions and compliance with end of life plans.

| **What are the key success factors for implementation of this scheme?** |
| Effective engagement of different agencies in care co-ordination and end of life planning process. This will be facilitated by the co-ordinator role. |
Note on contribution of individual schemes to the targets for non-elective reductions:

The target to reduce non-elective admissions by 3.5% (860) in 2015 has been accepted as challenging but realistic in the context of the extra BCF funding. This is based on benchmarking and other evidence that demonstrates that a reduction of this order should be possible if services are more effectively co-ordinated, as set out in the case for change.

The schemes in the BCF are all designed to make a contribution towards this target, and are highly inter-related as an overall programme of support. They are also operating alongside other admissions reduction initiatives funded outside the BCF. For example a service user at risk of admission could benefit from a package of care and interventions that could well include several of the BCF services (e.g. discharge support, re-ablement or intermediate care, home care, carer support, telecare, community equipment, enhanced rapid response and other services) as well as services such as the Falls service or GP initiatives such as holistic health assessments outside the BCF. Demonstrating the extent to which each of these may individually reduce emergency admissions is therefore extremely difficult.

Broad estimates have however been made to check the potential impact is in the right order of magnitude, based on estimated additional number benefitting, improved effectiveness under the integrated service model, and numbers possibly avoiding an admission as a result. These are not felt to be sufficiently robust to be used as scheme targets in the programme management of the BCF, although as the detailed schemes are implemented more robust impact monitoring arrangements will be established to maximise our understanding of the evidence of impact.

These estimates are set out in the table below:
## Estimated impact of schemes on emergency hospital admissions

Appendix 1

Better Care, better quality of life in Southwark:

Our vision for integrated care and support for our local population through well co-ordinated, personalised health and care services.

This is a vision for the whole system, not just health and social care. It links key themes in Southwark’s Health and Wellbeing Strategy and other key strategies across the CCG and Council to support people to live independent, safe and healthy lives by giving them more choice and control over their care.

We want people to live healthy, independent and fulfilling lives, based on choices that are important to them.

Our vision for integrated care in Southwark is for people to stay healthier at home for longer by doing more to prevent ill health, by supporting people to manage their own health and well-being and by providing more services in people’s homes and in the community. We want people to feel in control of their lives and their care, with the services they receive co-ordinated and planned with them around their individual needs.

We will build upon our existing work to integrate services around people’s needs, but recognise that we now need to transform the way we work together across health and care to really achieve this.

Our key aspirations for integrated care in Southwark are to deliver:

- More care in people’s homes and in their local neighbourhoods
- Person-centred care, organised in collaboration with the individual and their carers
- Better experience of care for people and their carers
- Population based care that is pro-active and preventative, rather than reactive and episodic
- Better value care and support at home, with less reliance on care homes and hospital based care
- Less duplication and ‘hand-offs’ and a more efficient system overall
- Improvements to key outcomes for people’s health and wellbeing
- Stronger, more resilient communities
- Southwark as a great place to live and work

We will know we have achieved our ambition for integrated health and care in Southwark when we need to rely less on hospital-based care and care homes, because more care that is better value will be delivered in people’s homes and in their local neighbourhoods. People will be admitted to hospital quickly when they need to be, to access to the world class facilities and services. Hospitals will be able to
discharge people quicker, because effective and pro active services at home and in the community will help people get back on their feet and stay healthy and independent for longer.

We will take a population based approach to health, so that rather than just treating sickness, we recognise and address the wider determinants of ill-health across Southwark and the role of different services in promoting the public’s health. This is set out in Southwark’s Health and Wellbeing Strategy.

Why do we need to transform and integrate services?

There is a strong national and local drive towards integration, supported by new funding arrangements which necessitate joint working. The Care Bill will place a statutory requirement upon local authorities to carry out their care and support functions with the aim of integrating services with health and housing, and the Health and Social Care Act requires the NHS to ensure organisations work together to improve outcomes.

The way services are currently commissioned and organised does not always achieve our aims and our ambition is to work together to achieve better outcomes for our population and improved quality of life for individuals.

Southwark is a richly diverse borough with a significant asset base in terms of its people, its public services, its business communities, local economy and its social capital. The challenges we face are however significant. We have some world class services and yet we know we can do more to improve individual experiences, to improve the health of our local population and tackle health inequalities.

Our aspiration to improve the experience of local people, the challenges of our changing population, the increasing demands on our system and the economic challenge all mean we need to change.

Experience of patients and public: People in Southwark have told us they want care and support delivered in, or close to, their own homes. They want a response that is integrated and personalised, as expressed by the definition created by people who contributed to the ‘National Voices’ work:

“I can plan my care with people who work together to understand me and my carer(s), allowing me control, and bringing together services to achieve the outcomes important to me”*

*This is an agreed national definition of integration from “Integration: Our Shared Commitment”. It goes on to list a range of similar statements from the user perspective about what good integrated care should feel like.

Population and demographic challenges: Southwark’s population is younger, more transient, more ethnically diverse and more benefit dependent than is the case nationally and in many London boroughs. Although the older population is not increasing as quickly as in some regions, the over 85s population is rising. The
number of hospital admissions and use of A&E has increased much more rapidly than the growth in population. People are living longer but in Southwark people’s ‘healthy life expectancy’ is below the London average and poorer people continue to have lower life expectancy and lower healthy life expectancy. A very high proportion of older people in Southwark live in social housing, presenting an opportunity for valuable co-operation between health, social care and housing services.

Economic challenge: The unprecedented economic challenge means the need for health and social care to deliver better value is greater than ever. A significant proportion of the demand on our local health system and the council comes from increasing numbers of frail older people and people with multiple long term conditions, including mental health. Integrated care is most effective when it is focussed on support for those people who are identified as being at greatest risk of poor health outcomes without early intervention and much improved co-ordination of services.

Building on progress so far:

As partners of Southwark and Lambeth Integrated Care (SLIC) we have already taken some significant steps towards integrating care in the borough, including establishing more community based support for frail elderly people to respond quickly to prevent admission or facilitate early discharge. Community Multi Disciplinary Teams are in operation across the borough, and primary care services are beginning to be organised on a neighbourhood basis.

We have also taken steps to re-direct finances to support these new models of care, However, there is still much to do to transform the way that care is organised, experienced by citizens, and funded across the borough. Our plans for the future of integrated services will build on these successes but go further, focussing on delivering personalised, pro-active care to local communities.

The changes we want to achieve:

We want to create a sustainable system that supports the most vulnerable and delivers value for money. To achieve this we need a significant cultural shift across the whole system. This means a different set of relationships between the NHS, the Council and the community, moving to a model where local citizens are seen as people who can contribute and exercise control over their own lives, improving their own health and well-being.

We want to tackle health inequalities and develop a more effective approach to preventing poor health and supporting people to better manage their own conditions. We need better integrated early interventions so that people get the right help when they need it and we need to ensure that people who have more complex conditions receive an integrated and personalised service.

We recognise the vital role that carers play both in delivering care and in helping prevent further deterioration, so that people do not need more intensive packages of support over time. This means we need to ensure that carers can access the right support to maintain their own health and well-being and to continue in their caring role, wherever they seek help.
We recognise we need to invest in the development of social capital across the borough, with a particular focus on enabling people to take control and giving them the tools to manage their conditions effectively. To help build community networks and a more personalised approach we will organise health and care services on a neighbourhood model around groups of primary care practices. This means that doctors, nurses, social workers, therapists, housing support workers and home carers will be able to build a strong set of relationships and work in a more integrated way, with common objectives to improve health outcomes for their local population and to offer a good experience that promotes better quality of life for local citizens.

The role of the third sector will be vital in driving forward the approach for building strong community engagement and the experience of the sector will be invaluable as we look to put the vision for effective prevention into practice.

We will mobilise our communities and recognise their assets, strengths and abilities, not just their needs. We will build on the assets in our community to support active self management by people, and support between peers, carers and families to take control of their own health and well being to address issues such as smoking, loneliness, exercise and eating.

Integrated care and support is about partnerships beyond the NHS and social care – involving individuals, communities, voluntary and private sectors and the Council’s wider services, particularly employment and housing.

Healthwatch will help ensure that we are on track, and in particular that we provide services in a compassionate way that maintains people’s dignity.

**What does it mean for how we will commission services?**

The Council and CCG are committed to using our joint resources to achieve our shared vision. The way that services are currently commissioned and organised does not always achieve these aims, and there are many ‘hand offs’ and differential incentives that work against our vision of services working together to support better health and more independence.

This will mean realigning finances to commission more pro-active support that offers continuity of care and is joined up around people’s needs. Our plans, if successful, will mean less reliance on care in hospital or care homes, and more care in people’s home or delivered in community based settings. We will work with partners in SLIC and the acute sector to enable this shift of resources to happen.

We will use our resources differently to remove organisational impediments to the provision of person-centred care and financially incentivising prevention, earlier intervention, recovery and re-ablement with our providers.
The pattern of services will be different in a number of ways:

The focus for the whole system is to enable people to live independently and well for as long as possible, using the widest range of mechanisms and support options possible. Some of the key aspects of change we want to see are:

- more care for older people and people with long term conditions will be delivered through locality based community multi-disciplinary teams with a lead professional responsible for co-ordinating the care of individuals, ensuring an integrated and personalised approach to case management by all services working with each person - GPs, Community Health, Social Care, Housing, Mental Health workers and hospital services.
- there will be less care needed in acute settings. A&E attendance and avoidable emergency admissions will reduce as community teams provide more targeted support to those at risk.
- When people do need acute care they will stay in hospital for shorter periods, returning home safely with the help of services such as @Home (Home Ward) and enhanced discharge support.
- re-ablement and intermediate care will increasingly provide effective short term interventions that rehabilitate people, restoring health and independence
- the balance of social care will shift away from care homes towards support in people’s own homes and supported housing schemes including Extra Care.
- home care services will be funded with a view to radically improving quality and outcomes, with home carers linked in with other health and care professionals through the multi-disciplinary team approach
- there will be enhanced support for carers
- there will be a greater role for technology through using telecare to help people live safely at home
- a more integrated and coherent approach to preventative services including the voluntary sector tackling issues such as social isolation
- services will be responsive and accessible 7 days a week, including social care and admission avoidance community services as well as primary care
- new focus on developing dementia related services
- developing a neighbourhood health champions model

Achieving genuinely integrated care will have far reaching implications for the health and social care workforce and for the way that staff are trained and work together. Our workforce will need to be well-informed, appropriately skilled and clear of its common purpose in delivering person-centred care. We are committed to investing in the workforce so that they are appropriately skilled and trained for new ways of delivering care, and have a shared approach to coordinating care around people’s needs. Staff will need to work increasingly flexibly in integrated teams, with more staff working in the community and in people’s homes. We will ensure that we have the right range of staff to respond flexibly to people’s needs and that all staff across our system feel valued for their contribution to keeping Southwark people as healthy and independent as possible.
Better Care Fund - Southwark - appendix 2

Case for Change - Background documentation from SLIC integration business case research
We are all working together to increase the value of care we provide for the people of Lambeth and Southwark

Objectives of high value care

- Quality & Outcomes
  - Clinical outcomes
  - Clinical safety
  - Life outcomes

- Experience
  - Citizen
  - Carer
  - Staff

- Value

- Cost
  - Activity rate
  - Per capita cost
  - Cost growth

Issues in our current system

- Quality
  - The care people experience could and should be improved
  - Commissioners are now looking to providers to focus on co-producing outcomes with patients through services that feel very different with an emphasis on being preventative, holistic and empowering

- Cost
  - If we carry on without change they system will go broke
  - By working together to deliver preventative and coordinated care we can significantly reduce the gap
  - But this will requires a fundamental shift in the way we work both clinically and operationally, underpinned by a new way of contracting with commissioners

The following slides provide more detail of the case for change within Southwark and Lambeth
Quality: commissioners are looking to us to work together differently to improve people’s health and care outcomes

The care people experience could and should be improved
• In Lambeth and Southwark we have world-leading health and care institutions, yet our overall health outcomes are worse than average
• When asked, people describe a desire to have more control over their care, particularly with respect to those who live with long term conditions
• Evidence from local, national and international practice shows that different models of care can be used to help reduce people’s need for unplanned care, reduce time spent in hospital and care home settings, to increase people’s sense of empowerment, and to improve their overall health outcomes
  • Local examples include pioneering work within the Diabetes Modernisation Initiative, The Lambeth Living Well Collaborative and the Older People’s Programme

In response, commissioners are now looking to providers to:
• focus on improving the outcomes we co-produce with citizens, rather than the inputs we use or outputs we deliver, with an emphasis on reducing unplanned admissions (e.g. through the Better Care Fund)
• develop services which:
  • Empower and activate people and communities, enabling people to be in control of their health and wellbeing
  • Offer holistic and co-ordinated care and support
  • Are equitable, proactive, preventative and focused on better outcomes
**Cost:** we need to ensure that the total costs of the system remain affordable – there is one system one budget!

If we carry on without change they system will go broke
• We estimate that in the ‘do nothing scenario’, health and social care spend in Southwark and Lambeth will increase by ~35%
• When compared against the funding allocations, the financial gap for social and health care in Southwark and Lambeth is projected to be ~£339m by 2018/19

By working together to deliver preventative and coordinated care we can significantly reduce the gap:
• Modelling work on our local data suggests that, through better care integration, the local system could reduce this gap by £163m, but this would require investment of £39m in new services (net saving £124m). This is the biggest opportunity we have for addressing the funding gap
• Taking this into account, integrated care could decrease the forecast social and health care spend across Southwark and Lambeth by ~11%

But this will requires a fundamental shift in the way we work both clinically and operationally, underpinned by a new way of contracting with commissioners
• The savings and investments associated with integrated care would change the balance of spend in health and social care
  • For example funding into acute trusts would decrease by an estimated £19m, and funding into primary care would need to increase by £46m
For our population of 600,000 people we have world-class medical institutions but worse than average outcomes and deprivation

Source: Health Profiles 2013
There is good local practical and theoretical evidence to show that new models of integrated care can improve outcomes for people.

1. Early identification and intervention to avoid crisis
   - Too little emphasis was placed on keeping people healthy and avoiding crisis development.

2. Providing alternative urgent response
   - Limited ability to correspond electronically between GPs and hospital.
   - No way to view GP record within an Emergency Department.

3. Improving hospital discharge and reablement services to maximise independent living
   - Internal and external processes were making it difficult to discharge people in a timely and effective way and inadequate communication provision of reablement services was impacting on flow into and out of hospital.

4. Using IT to support integration
   - Multi-disciplinary discussions had no secure way of discussing information about a person’s care other than via email.

Anticipated benefits

By 2015/16:

- **Bed Reduction**
  - Through reduced admissions & LOS
  - • 23,500 bed days saved
  - • Equates to 32 beds for each acute

- **Social Care Reduction**
  - • 20% reduction in residential packages
  - • Equates to 133 less packages of care

- **Improved patient experience**

......Working together for healthier and happier lives
And global research shows successful integrated care systems require three core building blocks...

...by working in a multi-disciplinary system...

1. Patient registry
2. Risk stratification
3. Care packages
4. Care plans
5. Care delivery
6. Case conference
7. Performance review

...supported by key enablers...

- Aligned incentives and reimbursement models
- Accountability and joint decision-making
- Information transparency and decision support
- Clinical leadership and team working
- Patient engagement

…….Working together for healthier and happier lives
New services should feel different: people should experience services that are empowering, holistic and preventative.

Attributes of integrated Care

Empowers and activates people and communities, enabling people to be in control of their health and wellbeing:
- Recognises, uses and develops all the assets available in our communities
- Empowers people to be active and in control of their own care, and supports the needs of carers
- Promotes choice for individuals, their families and carers
- Provides more care in people’s homes, or supports them in community settings close to home, which enable them to stay as well and independent as possible

Offers holistic and co-ordinated care and support
- Works with people holistically across their physical, mental and social dimensions
- Meets the needs of all citizens, is easily understood and navigated by individuals
- Provides continuity of care over time, and co-ordinates care across settings and providers
- Ensures effective transition for individuals between services
- Removes duplication and feels seamless to individuals

Is proactive, preventative and focused on better outcomes
- Actively promotes good health and well-being across communities, enabling people to live healthier, more independent lives, for longer
- Detects problems earlier and intervenes quicker
- Avoids crisis and the need to address avoidable complications
- Aids recovery and a return to independence
- Provides equitable access for
We estimate that in the ‘do nothing scenario’, health and social care spend in Southwark and Lambeth will increase by ~35%.

The methodology used to calculate the financial gap is different to how CCGs report the gap in their strategic plans. We define it here to include the total gross QIPP requirement subtracting all investment costs, and adding back any projected savings. The rationale is that the gap as presented here reflects the total challenge under status quo conditions. The bridge between CCG QIPP and the CCG financial challenge as reported here, is set out in the appendix.

1 CCG forecasted financial gap, including running cost allowance, and excluding BCF
2 Does not include the Public health budgets held jointly by CCG and Local Authorities
Note: Numbers may not add up due to rounding; numbers as presented in last ICG meeting

In addition there will be several **cross-cutting themes** that should be used to prioritise the particular approach within each grouping, e.g. frailty, deprivation, behaviour, social involvement, utilisation risk, presence of a carer, a person’s own caring responsibilities

1 Small numbers of citizens in this category; ICG to confirm how to approach this group

**Numbers represent estimates derived from the Year of Care (YoC) database. ~60% of total cost (~£660 mln out of ~£1,090 mln) has been linked to the segments. The remaining ~40% of CCG, NHSE and LA spending has been proportionally distributed across the segments. The YoC database includes spend for the following settings: Acute, MH, CHS, CC, Prescribing, SC and GPs. Other CCG spend e.g., contract reserves has been evenly allocated to each citizen. Specialist commissioning spend is excluded. Citizens in groups 7, 8, 9 and 12 cannot be identified in the YoC data.**

**YoC provides only data on adults with Learning Disabilities in Lambeth, where the estimated “per capita” spend equals ~£43,000.**

Each of the studied business cases and clinical papers records actual savings that have been observed during an adequate time span (i.e. mostly within 5 years)

1 Excludes groups 7, 8, 9 and 12, where no cost data is currently available
2 As part of total acute spend in segment; where no information on investment, savings reduced by 5-10%

SOURCE: Expert interviews; Press search

Working together for healthier and happier lives
Our modelling shows that investments of £39m are needed to release potential savings of £163m, a net saving of £124m.

Local authorities will adopt a number of approaches with the aim of prioritising spending to achieve a balance of support for early intervention, prevention, and respite care services and the delivery of services to those people with higher levels of need. Integrated care should also help providers to achieve the tariff efficiency targets e.g., by reduced number of readmissions.

All savings and investments to be revised as plans for specific IC interventions are developed in more detail.

1 National planning guidance on 4%pa tariff efficiency for acute, mental health and community services.
2 More details on LA approach regarding options available for the financial gap closure can be found in the appendix.

SOURCE: YoC database, Southwark and Lambeth CCG plans.
Commissioners’ ability to invest in new services is based upon the ability to move resources from acute trusts...(1/2)

### Financial challenge bridge for acute Trusts – only includes services at GSTT and KCHT for Southwark and Lambeth CCG

<table>
<thead>
<tr>
<th>13/14 revenue</th>
<th>Demand growth 13/14-18/19</th>

</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>89</td>
</tr>
</tbody>
</table>

1 This is equivalent to the 4% ‘tariff efficiency’ real reduction in prices that is embedded in Tariffs.
2 Lambeth and Southwark CCG represent 16% total income (21% clinical income for KCH, and 19% total income (25% NHS clinical income) for GSTT. The total 5 year savings requirements for the Trusts when considering their full business (equivalent to the £210m challenge here), as reported by the Trusts, are approximately £350m (KCH) and £310m (GSTT) – this is beyond the scope of the SLIC work so has not been derived or tested here. The Trusts report that “The financial challenge to the Acute providers will be greater than the national efficiency factor of 4.5% due to additional cost pressures in the system such as a phased reduction of training & education funding, the loss of project diamond funding, Commissioner QIPP targets, cost pressures such as pension costs, medical locum and nursing agency costs due to staff shortages and an increased nursing requirement regarding patient acuity. In order to provide adequate capacity, there is an increased cost of debt service and associated PFI cost pressures.” – Head of Financial Planning, King’s College Hospital May 2014

**Potential activity reductions through integrated care (based on case studies and benchmarking) approximately offsets demand growth (£122m vs. £118m), so the net change in Trust activity is small**

**Remaining £89m is a large financial pressure on Trusts**

**This analysis represents a small part of the larger financial challenge for the acute Trusts, as Lambeth and Southwark account for less than 20% of total Trust revenue**

---

**SOURCE:** SLIC financial modelling, based on CCG plans (Southwark v.28.2.2014) and Lambeth (v.10.3.2014) and comments provided by Trusts May 2014
On the current trajectory, 2018/19 would see the provision of £118m of acute activity that commissioners cannot afford given their future allocations and aspirations for spending on non-acute services.

Under this scenario, acute providers would be left with unrecoverable costs.

Halting this increase will take a heroic effort.

Cases studies and benchmarks indicate that integrated care can reduce activity by £122m offsetting this growth.

Doing this will require a significant increase in the resources in primary and community and their effectiveness.

Even with activity remaining flat, acute Trusts will need to achieve productivity savings that offset the £89m pressure from tariff efficiency.

Out of hospital services, including community, mental health will also have to manage price reductions of 4% below cost inflation (a total of £7m).

However, there will be a need to invest additional resources in out of hospital services to deliver these improvements in health.
Implementing IC would change the balance of spend in health and social care away from acute hospitals

To support finalisation of plans, we have provided estimates of future performance, based on a simple time series projection of historic data for each metric. We recognise that these are crude methodologies, but it may be useful to consider when setting your plans for each of the national methods in 2014-15 and 2015-16. As part of the assurance process centrally we will be looking at plans compared to the counterfactual (what the performance might have been if there was no BCF).

No cells need to be completed in this tab. However, 2014-15 and 2015-16 projected counts for each metric can be overwritten (white cells) if areas wish to set their own projections.

*No of admissions - historic and projected

X Planned (from TBW) RAP

Notes: No cells need to be completed in this tab. However, 2014-15 and 2015-16 projected counts for each metric can be overwritten (white cells) if areas wish to set their own projections.

### Non-elective admissions (general and acute)

* The projected rates are based on annual population projections and therefore will not change linearly.

### Residential admissions

* This is based on a simple projection of the historic proportion.
### Reablement

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Patients (%)</td>
<td>82.7</td>
<td>81.4</td>
<td>81.4</td>
<td>81.4</td>
<td>81.4</td>
</tr>
</tbody>
</table>

*This is based on a simple projection of the metric proportion, and an unchanged denominator (number of people offered reablement)*

### Delayed Transfers
