Commissioning Alliance**  
Partnership of Clinical Commissioning Groups

# Delivering the NHS Long Term Plan in ... and across south east London: CCG reform

## What's happening?

In south east London we are working as a partnership across CCGs, providers and local authorities to ensure we take collective responsibility for improving services for our residents; whilst living within our means.

We want to build on this and create one single CCG for south east London by April 2020.

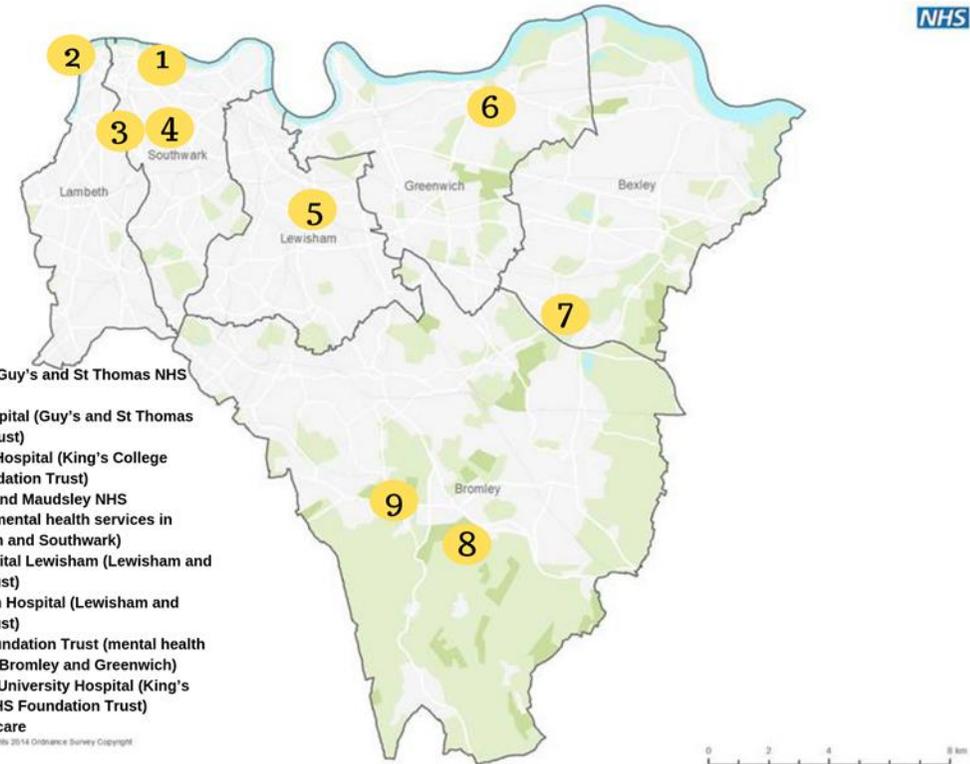

This will be a step on our journey to working as part of an integrated care system (ICS).

# The vision for south east London

A single CCG will help us to co-ordinate services and make decisions in a joined up and responsive way across our boroughs.

People cross boundaries and care pathways should follow them.

Borough based boards in each borough will be responsible for local services, bringing together health and social care as part of the south east London CCG.

# What does this mean for local residents?

---

- We will be able to plan services better:
  - across south east London, for example cancer care, maternity and planned operations
  - in each borough building on all the work with councils and other partners to bring health and care services together to really focus on health needs and outcomes
- We will have more to spend on patient services by saving £4.7million in management costs across south east London by 2021.

# Our integrated care system approach

---

A single CCG for south east London will support our ICS approach that considers how to:

- Support **Primary Care Networks** of primary, mental health, and community care at a **neighbourhood level**
- Develop **Local Care Partnerships** - integrating health, social care and providers **within the boroughs – in Southwark this is Partnership Southwark**
- Work with **hospital and mental health trusts across multiple boroughs/ south east London** and specialist services **across and outside the ICS**
- South east London, working as a collection of health and care partners forms our **Integrated Care System (ICS)**
- As we move to an operational integrated care system, commissioning will take place in different parts of the system which we refer to as our **‘System of systems’**
- **Each level of this ‘system of systems’ will link together to provide the best support to our population, driving best value across health and care, and living within our means.**
- We will also continue to work with other ICSs across London

# The Proposed single Governing Body composition

The proposed Governing Body membership supported by the chairs of the six current Governing Bodies and the SEL LMC is:

Board	Type	Member	Voting	Total per type
Governing Body	Clinical	SEL Chair X 1	Yes + Casting	13 Voting GPs + casting vote provides a GP majority (total 15 voting clinicians)
		GPs X 12	Yes	
		Secondary Care Dr X 1	Yes	
		Registered Nurse X 1	Yes	
	Lay	Lay Member X 3	Yes	3
	Exec	Accountable Officer X 1	Yes	8
		Chief Financial Officer X 1	Yes	
		Place Based Directors X 6	Yes	
	Total voting			

Healthwatch will be a member of each Borough Based Board and, as the result of collaboration and investment, the SEL CCG Governing Body

# Membership of a borough based board

There will be a borough based board in each borough with CCG and local authority representation with accountability to the local authority and the south east London CCG.

The following core membership is proposed:

- Borough Based Director
- The two GPs from the SEL Governing Body
- One lay member
- Director of Public Health (non-voting for CCG matters)
- Healthwatch (non-voting)
- LMC (non-voting)

There are ongoing discussions with local authorities about membership and the range of decisions the place based board will be responsible for.

# How will we make sure that patients are involved in new structures?

---

- Becoming one CCG is just one step on our journey towards becoming an integrated care system. We will continue to involve patients and the public as we develop new ways of providing health and care services in our boroughs and across south east London.
- The CCG will still have a duty to involve patients in commissioning health and care and to ensure that patients are involved in their own health and care.
- We are developing communications and engagement plans setting out how we want to work with existing patient groups and forums to be sure that systems for involving public and patients remain strong.
- We expect that most involvement will happen at neighbourhood and borough level as it does now.

# Being involved and having a say

## Meetings taking place in public:

- South East London CCG Governing Body meetings and AGM
- Southwark Borough Based Board meetings
- SEL Primary Care Commissioning Committee

## PPG meetings:

- North and south Southwark PPG meetings
- Practice based PPG meetings
- My PPG Chat forum

## Engagement meetings:

- Workshops
- Focus groups and codesign

## Understanding experience:

- Surveys
- Collecting stories
- Outreach

## Working with Healthwatch

## Working with Southwark Council:

- Community Empowerment Forums
- Community Conversations
- Citizens Jury

We are working toward a single SEL CCG and borough based systems in place by 1 April 2020

- March 2019: Governing Bodies agreed to develop proposals to create one south east London CCG as a step towards becoming an Integrated Care System (ICS).
- March to May: Inform stakeholder, staff and partners and get their views
- May to July: Share and discuss our plans with patients and the public
- September: Proposals to merge considered by Governing Bodies  
Application made to merge the south east London CCGs to NHS England
- April 2020: Establish a single CCG with placed based boards in each part of south east London

# Questions and discussion
